

FEATURES

- Pb
- HALOGEN

- Temperature 85°C/85% Humidity
- Long cycle life,maintenance-free
- Low leakage current, High reliability
- REACH, RoHS Directive Compliant

APPLICATIONS

• Consumer electronics, Power Holdup Modules, Energy Harvesting, UPS/Industrial,Robotic Power,High Pulse Current Applications.

OPERATING TEMPERATURE RANGE

- -40°C to +85°C @2.7V
- -40°C to +85°C @2.5V 85% Humidity 1000 hours

Item	Performance				
Operating temperature	-40°C to +85°C				
Capacitance range	0.22F to 100F				
Rated voltage	2.7 V				
Surge voltage	2.85 V				
Tanan anatuma ah anastaniatian	Capacitance change: Within ±30% of initial measured value at +25°C				
Temperature characteristics	Internal resistance: Within ±200% of initial measured value at +25°C				
	After 85°C 1000 hours :				
High temperature load time	Capacitance change: ±30% of initial rated value				
	Internal resistance: Within 2 times of initial specified value				
Projected cycle life	After 500,000 cycles:				
(From rated voltage to 1/2 rated	Capacitance change: Within ±30 % of initial rated value				
voltage at 25°C)	Internal resistance: Within 2 times of initial specified value				
	Relative humidity: 90%~95% /Duration of testing:240 hrs /Temperature:40±2°C				
Humidity characteristic	Capacitance change: Within ±30 % of initial rated value				
	Internal resistance: Within 2 times of initial specified value				
	Amplitude:1.5mm /Frequency:10~55Hz /Duration: X,Y,Z(2 hrs)/Duration of testing:6 hrs				
Vibration resistance	Capacitance change: Within ±30 % of initial rated value				
	Internal resistance: Within 2 times of initial specified value				
Shelf life	After 2 years at 25°C without load, the capacitor shall meet the specified endurance limits.

^{*}with appropriate voltage derating operating temperature can be extended to 85 $^{\circ}\text{C}$

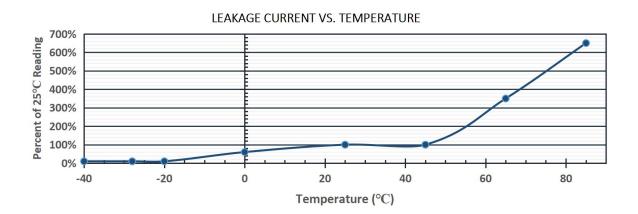

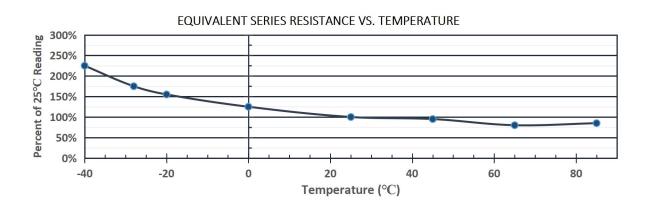

QUALITY AND RELIABILITY

LIFE TIME AND TEMPERATURE PERFORMANCE

The life of a Super Capacitor is impacted by a combination of operating voltage and the operating temperature according to the following equation:

$$L = L_0 \times 3.25 \frac{T_0 - T}{10} \times 1.52 \frac{V_0 - V}{0.1}$$

L: is the theoretical lifetime at T temperature;

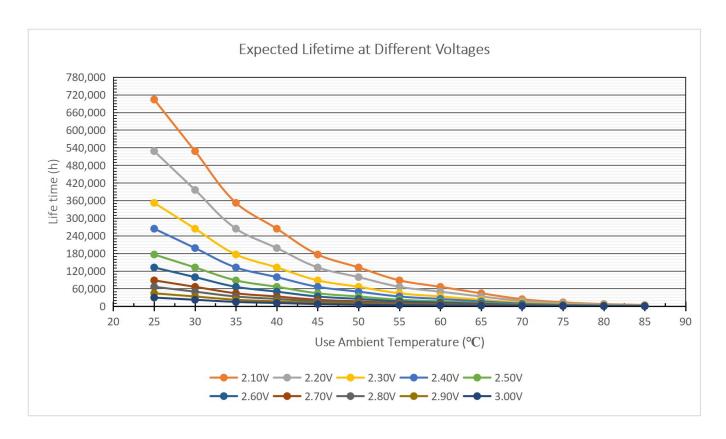

L₀: is the working life of the highest rated working temperature;

T: is the actual working temperature;

T₀: is the highest rated working temperature;

V: is the actual working voltage;

V₀: is the highest rated working voltage.

*Note: Estimated lifespan: The estimated lifespan under different operating voltages and operating temperatures in a theoretical environment. For the actual service life, please contact us to discuss the working conditions.

SAFETY RECOMMENDATIONS

CHW Series

WARNINGS

- To Avoid Short Circuit, after usage or test, SuperCapacitors voltage needs to discharge to $\leq 0.1 \text{V}$.
- Do not Apply Over-voltage, Reverse Charge, Burn or Heat Higher than 150°C, explosion-proof valve may break open.
- Do not Press, Damage or disassemble the SuperCapacitor, housing could heat to high temperature causing Burns .
- If you observe Overheating or Burning Smell from the capacitor disconnect Power immediately, and do not touch.

REGULATORY

- MSDS
- · RoHS Compliant
- · Reach Compliant

TRANSPORTATION

Not subjected to US DOT or IATA regulations UN3499, <10Wh, Non-Hazardous Goods International shipping description – "Electronic Products – Capacitor"

PRECAUTIONS FOR WELDING

When soldering supercapacitors to a PCB, the temperature & time that the body of the supercapacitor sees during soldering can have anegative effect on performance. We advise following these guidelines:

- Do not immerse the supercapacitors in solder. Only the leads should come in contact with the solder.
- Ensure that the body of the supercapacitor is never in contact with the molten solder, the PCB or other components during soldering.
- Excessive temperatures or excessive temperature cycling during soldering may cause the safety vent to burst or the case to shrink or crack, potentially damaging the PCB or other com-ponents, and significantly reduce the life of the capacitor.

WAVE SOLDERING

Only use wave soldering on Radial type supercapacitors. The PCB should be preheated only from the bottom and for less than 60 seconds, with temperature at, or below, 100°C on the top side of the board for PCBs equal to or greater than 0.8 mm thick.

Solder Temperature	Suggested Solder	Maximum Solder		
(°C)	Time (s)	Time (s)		
220	7	9		
240	7	9		
250	5	7		
260	3	5		

HAND SOLDERING

Keep distance between the supercapacitor body and the tip of the soldering iron and the tip should never touch the body of the capacitor. Contact between supercapacitor body and soldering iron will cause extensive damage to the supercapacitor, and change its electrical properties. It is recommended that the soldering iron temperature should be less than 350°C, and contact time should be limited to less than 4 seconds. Too much exposure to terminal heat during soldering can cause heat to transfer to the body of the supercapacitor, potentially damaging the electrical properties of the supercapacitor.

REFLOW SOLDERING

Infrared or conveyor over reflow techniques can be used on these supercapacitors. Do not use a traditional reflow oven with-out clear rated reflow temperature for supercapacitors.
