

Ultra-Small, Ultra-Low Power MEMS Oscillator with Spread Spectrum

Features

- Output Frequency: 1 MHz to 100 MHz LVCMOS
- Spread Spectrum Options:
 - Center-Spread: $\pm 0.25\%$, $\pm 0.5\%$, $\pm 1.0\%$, $\pm 1.5\%$, $\pm 2.0\%$, $\pm 2.5\%$
 - Down-Spread: -0.25% , -0.5% , -1.0% , -1.5% , -2.0% , -3.0%
- Ultra-Low Power Consumption: 3 mA (Active), 1 μ A (Standby)
- Wide Supply Voltage Range: 1.71V ~ 3.63V V_{DD}
- Ultra-Small Package Sizes:
 - 1.6 mm x 1.2 mm VFLGA
 - 2.0 mm x 1.6 mm VFLGA
 - 2.5 mm x 2.0 mm VLGA
 - 3.2 mm x 2.5 mm VDFN
 - 5.0 mm x 3.2 mm VDFN
 - 7.0 mm x 5.0 mm VDFN
- Wide Temperature Range:
 - Automotive: -40°C to $+125^{\circ}\text{C}$
 - Ext. Industrial: -40°C to $+105^{\circ}\text{C}$
 - Industrial: -40°C to $+85^{\circ}\text{C}$
 - Ext. Commercial: -20°C to $+70^{\circ}\text{C}$
- Excellent Shock and Vibration Immunity
 - Qualified to MIL-STD-883
- High Reliability
 - 20x Better MTBF than Quartz Oscillators
- Lead Free and RoHS Compliant
- Automotive AEC-Q100 Option Available

Applications

- Flat Panel Display/Monitor
- Multi-Function Printer
- Digital Signage
- Consumer Electronics

General Description

The DSC63xxB family of devices is the industry's smallest and lowest-power spread-spectrum MEMS oscillators. Available in three different package sizes with operating current as low as 3 mA, the smallest 4-pin package is a mere 1.6 mm x 1.2 mm in size. The devices support up to $\pm 2.5\%$ or -3% spread spectrum that can achieve up to 15 dB electromagnetic interference (EMI) reduction. Because of industry standard package and pin options, customers can solve last minute EMI problems simply by placing the new DSC63xxB on their current board layout with no redesign required.

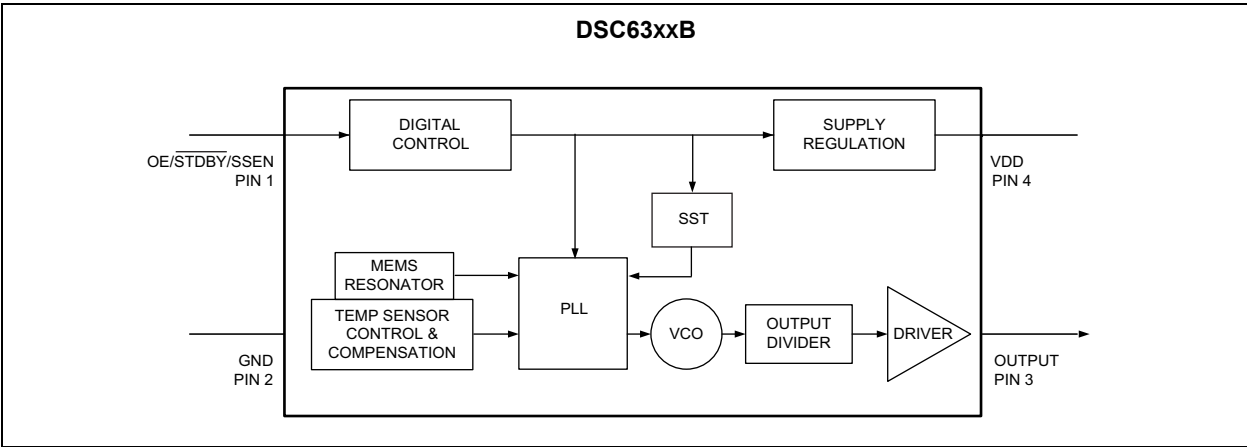

The DSC63xxB family is available in 1.6 mm x 1.2 mm & 2.0 mm x 1.6 mm VFLGA, 7.0 mm x 5.0 mm, 5.0 mm x 3.2 mm & 3.2 mm x 2.5 mm VDFN, and 2.5 mm x 2.0 mm VLGA packages. These packages are "drop-in" replacements for standard 4-pin CMOS quartz crystal oscillators.

TEMPERATURE SPECIFICATIONS (Note 1)

Parameters	Sym.	Min.	Typ.	Max.	Units	Conditions
Temperature Ranges						
Junction Operating Temperature	T_J	-40	—	+150	$^{\circ}\text{C}$	—
Storage Ambient Temperature Range	T_A	-55	—	+150	$^{\circ}\text{C}$	—
Soldering Temperature	T_S	—	+260	—	$^{\circ}\text{C}$	40 sec. max.

Note 1: The maximum allowable power dissipation is a function of ambient temperature, the maximum allowable junction temperature and the thermal resistance from junction to air (i.e., T_A , T_J , θ_{JA}). Exceeding the maximum allowable power dissipation will cause the device operating junction temperature to exceed the maximum +150 $^{\circ}\text{C}$ rating. Sustained junction temperatures above +150 $^{\circ}\text{C}$ can impact the device reliability.

DSC63XXB

2.0 PIN DESCRIPTIONS

The DSC63xxB is a highly configurable device and can be factory programmed in many different ways to meet the customer's needs. Microchip's ClockWorks® Configurator <http://clockworks.microchip.com/Timing/> must be used to choose the necessary options, create the final part number, data sheet, and order samples. The descriptions of the pins are listed in [Table 2-1](#).

TABLE 2-1: DSC63XXB PIN FUNCTION TABLE

Pin Number	Pin Name	Description
1 (Note 1)	OE	Output Enable: H = Active, L = Disabled (High Impedance).
	$\overline{\text{STDBY}}$	Standby: H = Device is active, L = Device is in standby (Low Power Mode).
	SSEN	Spread Spectrum Enable: H = Enabled, L = Disabled.
2	GND	Ground.
3	Output	Oscillator clock output.
4	VDD	Power supply: 1.71V to 3.63V.

Note 1: DSC630xB/1xB/3xB has a 300 k Ω internal pull-up resistor on pin 1. DSC634xB/5xB/7xB has no internal pull-up resistor on pin 1 and needs an external pull-up or to be driven by another chip.

An explanation of the different options listed in [Table 2-1](#) follows.

2.1 Pin 1

This is a control pin and may be configured to fulfill one of three different functions. If not actively driven, a 10 k Ω pull-up resistor is recommended.

2.1.1 OUTPUT ENABLE (OE)

Pin 1 may be configured as OE. Oscillator output may be turned on and off according to the state of this pin.

2.1.2 $\overline{\text{STDBY}}$

Pin 1 may be configured as Standby. When the pin is low, both output buffer and PLL will be off and the device will enter a low power mode.

2.1.3 SPREAD SPECTRUM ENABLE (SSEN)

This pin, when high, enables spread spectrum modulation of the clock output. Various levels of center-spread and down-spread are available. For more details, see the [Spread Spectrum](#) section and the spread spectrum ordering codes on the [Product Identification System](#).

2.2 Pins 2 through 4

Pins 2 and 4 are the supply terminals, GND and VDD respectively. Pin 3 is the clock output, programmable to Standard and High Drive strength settings. Visit [ClockWorks® Configurator](#) to customize your device.

2.3 Output Buffer Options

The DSC63xx family is available in multiple output driver configurations.

The standard-drive (63x1) and high-drive (63x2) deliver respective output currents of greater than 3 mA and 6 mA at 20%/80% of the supply voltage. For heavy loads of 15 pF or higher, the high-drive option is recommended.

4.0 SPREAD SPECTRUM

Spread spectrum is a slow modulation of the clock frequency over time. The PLL inside the MEMS oscillator is modulated with a triangular wave at 33 kHz. With such a slow modulation, the peak spectral energy of both the fundamental and all the harmonics is spread over a wider frequency range and such an energy is significantly reduced, thus providing an EMI reduction. The triangular wave is chosen because of its flat spectral density.

The DSC63xxB MEMS oscillator family offers several modulation options: the spreading is either center-spread or down-spread with respect to the clock frequency. Center-spread ranges from $\pm 0.25\%$ to $\pm 2.5\%$, while down-spread ranges from -0.25% to -3% .

If the clock frequency is 100 MHz and center-spread with $\pm 1\%$ is chosen, the output clock will range from 99 MHz to 101 MHz. If down-spread with -2% is chosen, the output clock will range from 98 MHz to 100 MHz.

Figure 4-1 and Figure 4-2 show a spectrum example of the DSC6331 with a 33.333 MHz clock, modulated with center-spread of $\pm 1\%$.

FIGURE 4-1: DSC6331 Spectrum at 33.333 MHz with Modulation Turned Off.

FIGURE 4-2: DSC6331 Spectrum at 33.333 MHz with Modulation Turned On.

It is noticeable that the spread spectrum provides a reduction of about 10 dB from the peak power. Such a reduction may also be estimated by the following equation:

EQUATION 4-1:

$$EMI \text{ Reduction} = 10 \times \log_{10}(|S| \times f_c \div RBW)$$

Where:

- S Peak-to-peak spread percentage (0.01, this example).
- f_c Carrier frequency (33.333 MHz, this example).
- RBW Resolution bandwidth of the spectrum analyzer (30 kHz, this example).

The theoretical calculation for this example provides 10.45 dB, which is consistent with the measurement.

Similarly to the fundamental frequency, all the harmonics are spread and attenuated in similar fashion. Figure 4-3 shows how the DSC6331 fundamental at 33.333 MHz and its odd harmonics are attenuated when various types of modulations are selected. For picture clarity, only the center-spread options are shown. However, down spread with corresponding percentage provides the same level of harmonic attenuation (e.g. center-spread of $\pm 1\%$ provides the same harmonics attenuation of down spread with -2%).

NOTES:

APPENDIX A: REVISION HISTORY

Revision A (January 2019)

- Initial creation of DSC63xxB Microchip data sheet DS20006154A.

Revision B (November 2022)

- Added the 7.0 mm x 5.0 mm VDFN, 5.0 mm x 3.2 mm VDFN, and 3.2 mm x 2.5 mm VDFN package options throughout the document.
- Updated the previously existing package outline drawings to their most current versions.

NOTES:

Note the following details of the code protection feature on Microchip products:

- Microchip products meet the specifications contained in their particular Microchip Data Sheet.
 - Microchip believes that its family of products is secure when used in the intended manner, within operating specifications, and under normal conditions.
 - Microchip values and aggressively protects its intellectual property rights. Attempts to breach the code protection features of Microchip product is strictly prohibited and may violate the Digital Millennium Copyright Act.
 - Neither Microchip nor any other semiconductor manufacturer can guarantee the security of its code. Code protection does not mean that we are guaranteeing the product is "unbreakable" Code protection is constantly evolving. Microchip is committed to continuously improving the code protection features of our products.
