

Description

The Smart Power Relay E-1048-8I.- is a remotely controllable electronic load disconnecting relay with three functions in a single unit:

- electronic relay
- electronic overcurrent protection
- status indication

The 7 pin INLINE version is designed for use with various E-T-A terminal blocks, e. g. 17-P10-Si. A choice of current ratings is available from 1 A through 10 A. An operating voltage range of DC 9...32 V allows the connection of DC 12 V and DC 24 V loads.

In order to switch and protect loads remotely, it has until now been necessary to connect several discreet components together:

- an electro-mechanic relay, control cable and integral contact to close the load circuit
- an additional protective element (circuit breaker or fuse) for cable or equipment protection
- a device for current measurement (shunt)

Now type E-1048-8I. combines all these functions in a single unit, thus minimising the number of connections in the circuit and thereby reducing the risk of failures.

Applications

Type E-1048-8I. is suited to all applications with DC 12 V or DC 24 V circuits, where magnetic valves, motors or lamp loads have to be switched, protected or monitored:

- road vehicles (utility vehicles, buses, special vehicles)
- rail vehicles
- marine industry (ships, boats, yachts etc.)

The Power Relay is also suitable for industrial use (process control, machine-building, engineering) as an electronic coupling relay between PLC and DC 12 V or DC 24 V load

Features

- Integral power electronics provide a wear-resistant switching function, insensitive to shock and vibration.
- Only a fraction of the control power needed by electro-mechanical relays is required for switching loads. This is important for battery buffered load circuits which have to remain controlled even with the generator off line.
- The extremely low induced current consumption of less than 1 mA is absolutely necessary for battery buffered applications.
- The load circuit is disconnected in the event of an overload or short circuit, the trip curve is also suitable for smaller motor loads.
- The load circuit is permanently monitored for wire breakage.
- The device additionally provides the user with a load current-proportional analog voltage from 0 to 5 V to allow further processing of the actual value of the current flow in a power management system. This voltage signal can also be used for building up a control circuit or for disconnecting the unit at a low load current value by means of the external control.
- For switching and monitoring loads of 10 A plus it is possible to connect several units in parallel. Uniform power distribution between units must be ensured by symmetrical design of the supply cables (length and cross section).
- Coloured label, e. g. red = 10 A, see ordering information.

E-1048-8I... INLINE version

Technical Data ($T_U = 25^\circ\text{C}$, $U_S = \text{DC } 24\text{ V}$) ($T_U =$ ambient temperature at U_N)

Power supply LINE +

Type	DC power supply with small R_i battery and generator etc.
Voltage ratings U_N	DC 12 V/DC 24 V
Operating voltage U_S :	DC 9...32 V

Load circuit LOAD

Load output	Power MOSFET, high side switching
Max. current rating I_N	10 A
Types of loads	resistive, inductive, capacitive, lamp loads, motors (depending on duration of inrush current)
Current rating range I_N	1 A...10 A (fixed ratings) up to 85°C ambient without load reduction.
	Two basic versions with factory preset ratings: version 1: 1 A/2 A/3 A/5 A/7.5 A/10 A

Induced current consumption I_0 of the unit (OFF condition) $< 1\text{ mA}$
 Typical voltage drop U_{ON} at rated current I_N (at 25°C)

I_N	U_{ON}	I_N	U_{ON}
1 A	50 mV	7.5 A	90 mV
2 A	55 mV	10 A	110 mV
3 A	60 mV		
5 A	80 mV		

Switching point	typically $1.3 \times I_N$ ($-40^\circ\text{C}...+85^\circ\text{C}$: $1.1...1.5 \times I_N$)
Trip time (standard curve)	typically 200 ms with switch-on onto overload and/or load increase on duty
Current limitation	version 1: typically 75 A version 2: typically 350 A
Temperature disconnection After trip	power transistor $> 150^\circ\text{C}$ - resettable via external control signal (low-high) at control input IN+ - reset of supply voltage
Parallel connection of channels	for loads of 10 A plus, several units of identical current ratings may be connected in parallel. To ensure equal distribution of current between units, symmetrical design of the supply feed is necessary (length and cross section).
Leakage current in OFF condition	version 1: max. 100 μA version 2: max. 500 μA
Free-wheeling diode for connected load	integral version 1: max. 40 A version 2: max. 100 A

Technical Data ($T_U = 25^\circ\text{C}$, $U_S = \text{DC } 24\text{ V}$) ($T_U =$ ambient temperature at U_N)

Delay time $t_{\text{on}}/t_{\text{off}}$ (resistive load)	typically 5 ms / typically 1.5 ms (EMC filter in control input)
Wire breakage monitoring in ON and OFF condition of load	<p>wire breakage thresholds:</p> <p>in OFF-condition (version 1): $R_{\text{load}} >$ typically 100 kΩ</p> <p>in OFF-condition (version 2): $R_{\text{load}} >$ typically 10 kΩ</p> <p>in ON-condition: $I_{\text{load}} <$ typically $0.2 \times I_N$</p> <p>indication via group fault signalisation SF (switching output)</p> <p>Fault indication will not be stored, i.e. after remedy of wire breakage fault indication will disappear</p> <p>possible options:</p> <ul style="list-style-type: none"> - wire breakage indication only in ON condition - wire breakage indication only in OFF condition - no wire breakage indication) - disconnection of load, indication via group signal SF - no automatic re-start - after remedy of the fault unit has to be reset via control input IN+
Short circuit, overload in load circuit	<ul style="list-style-type: none"> - no wire breakage indication) - disconnection of load, indication via group signal SF - no automatic re-start - after remedy of the fault unit has to be reset via control input IN+

Control input IN+

Control voltage IN+ "ON"	0...5 V = "OFF", 8.5...32 V = "ON"
Control current I_E	1...10 mA (8.5...DC 32 V)
Reset in the event of a failure	- reset via external control signal (low - high) at control input IN+ - via reset of supply voltage

Switching frequency at resistive or inductive load	max. 100 Hz
--	-------------

Status and diagnostic function

Control signal AS	transistor output minus switching (LSS), open collector, short circuit and overload proof, max. load: DC 32 V/2 A 0 V-level: when unit is set (at IN+ = 8.4...32 V)
--------------------------	--

Group signal SF	transistor output minus switching (LSS), open collector, short circuit and overload proof, load max. DC 32 V/2 A 0 V-level with overload and short circuit disconnection, wire breakage indication
------------------------	---

Analogue output U(I)	voltage output 0-5 V proportional to load current: 1 V = $0.2 \times I_N$ 5 V = $1.0 \times I_N$ 5 V... typically 6.5 V = overload range tolerance: (for $I_{\text{load}} > 0.2 \times I_N$) $\pm 8\%$ of I_N max. output current 5 mA load resistance $> 1\text{ k}\Omega$ against GND
Trip times definition of t_{90} reached 90% of final value	response time when switching on a load: $t_{90} =$ typically 20 ms response time of load change on duty: $t_{90} =$ typically 1 ms

Visual status indication

Control signal AS	LED yellow
Group fault signal SF	LED red

General data

Reverse polarity protection

Control circuit	yes
Load circuit	no (due to integral free-wheeling diode)
Status outputs	interference voltage resistance max. DC 32 V

Technical Data ($T_U = 25^\circ\text{C}$, $U_S = \text{DC } 24\text{ V}$) ($T_U =$ ambient temperature at U_N)

Temperature range	
ambient temperature	- standard: $-40...+85^\circ\text{C}$ without load reduction - for other temperature ranges please see ordering key

Tests

Humid heat	combined test, 9 cycles with functional test test to DIN EN 60068-2-30, Z/AD
Temperature change	min. temperature -40°C , max. temperature $+90^\circ\text{C}$ test to DIN IEC 60068-2-14, Nb
Vibration (random)	in operation, with temperature change 6 g eff. (10 Hz...2,000 Hz) test to DIN EN 60068-2-64
Shock	25 g/11 ms, 10 shocks test to DIN EN 60068-2-27
Corrosion	test to DIN EN 60068-2-52, severity 3
Protection class	housing IP30 to DIN 40050

EMC requirements	higher protection class upon request EMC directive: emitted interference EN 61000-6-3 noise immunity EN 61000-6-2 Automotive directive: emitted interference, noise immunity: 72/245/EW6 und 95/54/E6
------------------	--

Terminals of INLINE version (7 pin, standard)

Mounting:	7 blade terminals 6.3 mm x 0.8 mm to DIN 46244-A6.3-0.8 contact material CuZn37F37 copper-plated and tin-plated - E-T-A socket type 17-P10-Si - on a pc board with 6.3 mm receptacles
-----------	--

Housing INLINE version

max. dimensions	INLINE: 11.5 x 50 x 56 mm when plugged in 11.5 x 50 x 66 mm including terminals
Materials	INLINE: PA66
Mass	approx. 23 g...33 g, depending on version

Approvals CE, e1 logo

	according to EU, EMC and automotive directives
