

ezo-humTM

Embedded Humidity sensor

Reads	Relative humidity Dew point Air temperature
Range	0 – 100%
Calibration	Factory calibrated
Response time	1 reading per second <small>(UART mode)</small> 1 reading per 300 milliseconds <small>(I2C mode)</small>
Accuracy	+/- 2%
Connector	5 lead data cable
Cable length	1 meter
Data protocol	UART & I²C
Default I2C address	111 (0x6F)
Data format	ASCII
Operating voltage	3.3V – 5V
IP rating	IP67
NEMA rating	6P
Life expectancy	10 years

Attention

The EZO-HUM™ is 100% operational out of the box.
CALIBRATION IS UNNECESSARY

Direct sunlight will heat the sensor above the air temperature, making the readings incorrect.

Can the sensor get wet?

Don't do that

Yes, readings will be $>100\%$ when wet and will return to normal once dry.

Physical properties

Weight 127g

IP rating IP67

NEMA rating 6P

Body 316 Stainless Steel

Pin out

1 1/16"
27mm

Data and power cable pinout

White - RX/SCL
Green - TX/SDA
Black - GND
Red - VCC
Blue - AUTO

Should you need to remove this connector from the data cable, follow the provided illustration.

The auto monitor pin will go high when a set humidity has been reached.

57.38%

0V

VCC

*Auto monitor set to 57.38%

If unused leave **AUTO** floating. Do not connect **AUTO** to **VCC** or **GND**.

See page 19 to enable auto-monitoring in UART mode.
See page 41 to enable auto-monitoring in I2C mode.

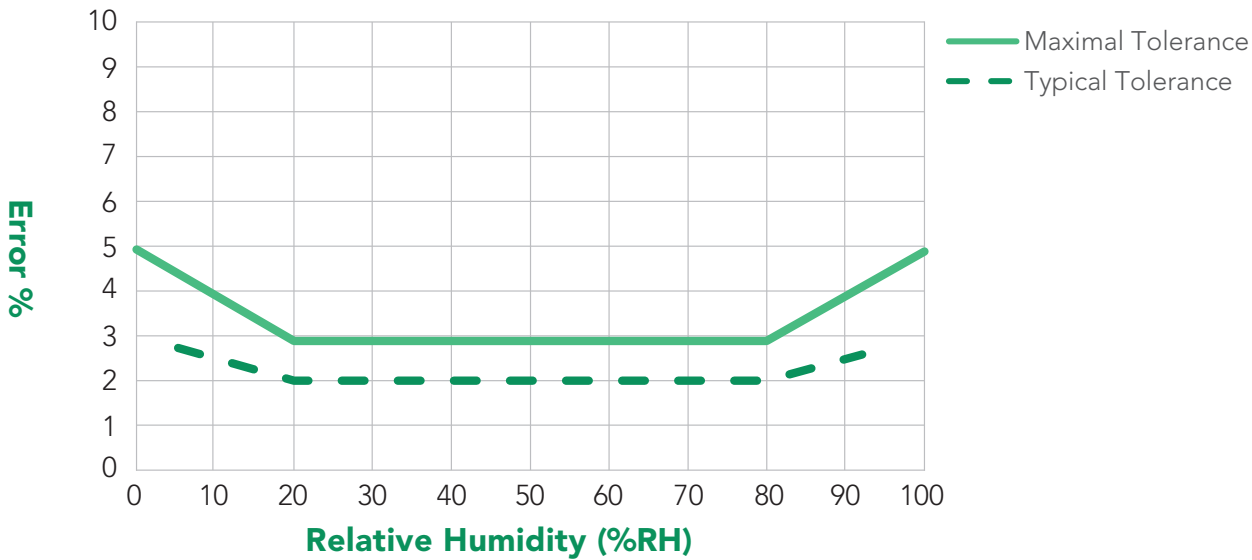

Power consumption

	LED	MAX	SLEEP
5V	ON	2.6 mA	0.5 mA
	OFF	2.4 mA	
3.3V	ON	2.2. mA	0.3 mA
	OFF	2.0 mA

Operational temperature	-20 °C	25 °C	80 °C
VCC	3.3V	3.3V	5.5V

Humidity

Air temperature

Calibration theory

The Atlas Scientific EZO-HUM™ Embedded Humidity Sensor comes pre-calibrated. The factory calibration data is permanently stored in the circuit and cannot be erased.

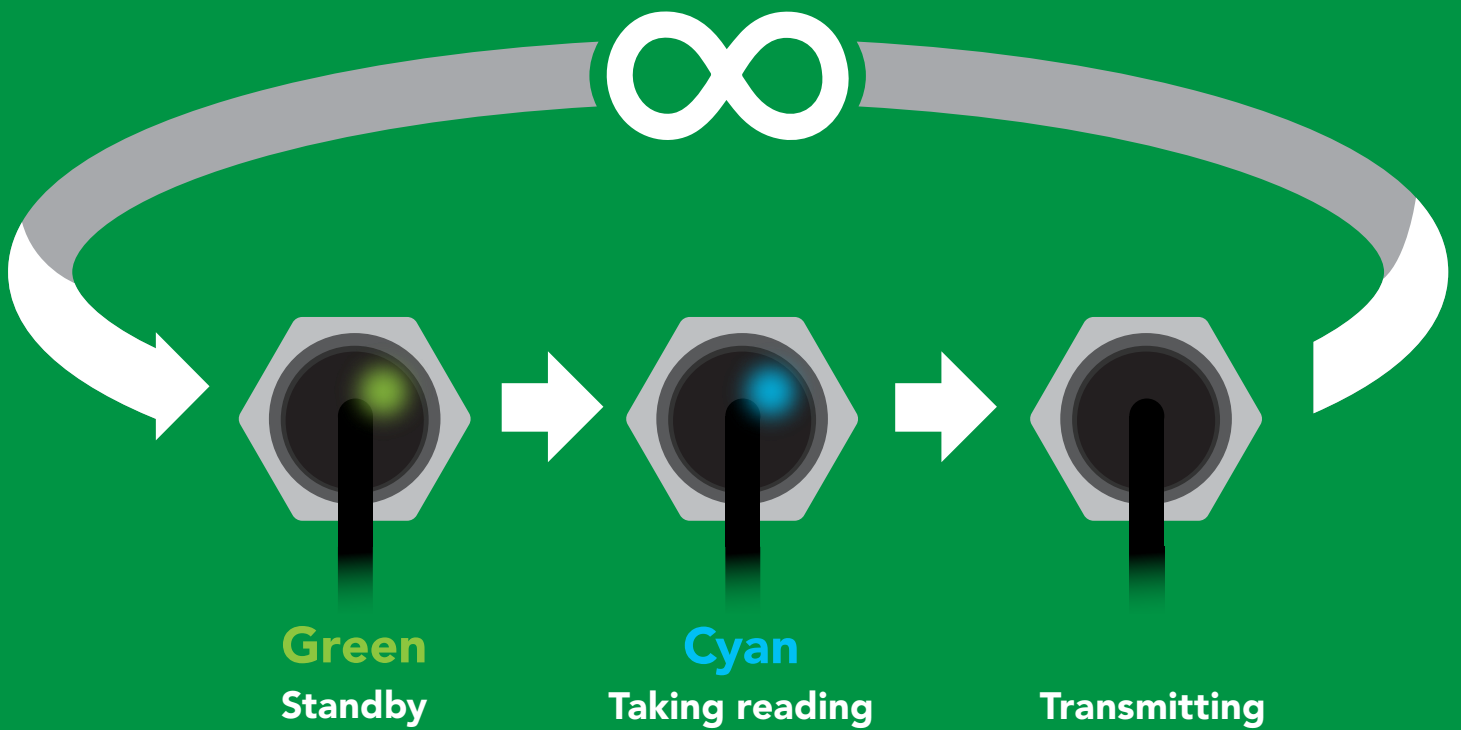

Custom calibration

This sensor does not require recalibration, and does not offer onboard custom calibration.

*OK <cr>

L,1

L,0

Find

Command syntax

This command will disable continuous mode
Send any character or command to terminate find.

Find <cr> LED rapidly blinks white, used to help find device

Example

Response

Find <cr>

*OK <cr>

Continuous mode

Command syntax

- C,1 <cr>** enable continuous readings once per second **default**
- C,n <cr>** continuous readings every n seconds (n = 2 to 99 sec)
- C,0 <cr>** disable continuous readings
- C,? <cr>** continuous mode settings

Example

Response

C,1 <cr>

***OK <cr>**
HUM (1 sec) <cr>
HUM (2 sec) <cr>
HUM (n sec) <cr>

C,30 <cr>

***OK <cr>**

Auto monitor

When enabled, the sensor will continuously monitor the readings and set the auto monitor pin high when your value has been reached. When Auto Monitor is enabled, it is not necessary to actively take readings (continuous mode can be disabled).

Command syntax

- `Auto,en, [0,1,2]` `<cr>` 0 = disable, 1= Enable for humidity, 2= Enable for dew point
- `Auto,n` `<cr>` The value that will set the alarm pin
- `Auto,tol,n` `<cr>` The value that will reset the alarm pin
- `Auto,?` `<cr>` Auto monitor settings

Example

`Auto,en,1 <cr>`

`*OK <cr>` Enable humidity automonitoring

`Auto,57.38 <cr>`

`*OK <cr>` Set alarm to go off at 57.38% humidity

`Auto,tol,1.2 <cr>`

`*OK <cr>` The humidity must fall 1.2 percentage points below set point for alarm to reset.

`Auto,? <cr>`

`?,auto,57.38,1.20,1 <cr>` if all are enabled

Enable/disable parameters from output string

Command syntax

O, [parameter],[1,0] <cr> enable or disable output parameter
O,? <cr> enabled parameter?

Example

O,HUM,1 / O,HUM,0 <cr>

O,T,1 / O,T,0 <cr>

O,Dew,1 / O,Dew,0 <cr>

O,? <cr>

Response

*OK <cr> enable / disable humidity

*OK <cr> enable / disable temperature

*OK <cr> enable / disable dew point

?,O,HUM,T,Dew <cr> if all enabled

Parameters

Hum Humidity
T Air temperature in °C
Dew Dew point

Followed by 1 or 0

1 enabled
0 disabled

*** If you disable all possible data types your readings will display "no output".**

Naming device

Command syntax

Do not use spaces in the name

Name,n <cr> set name

Name, <cr> clears name

Name,? <cr> show name

n =

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16

Up to 16 ASCII characters

Example

Response

Name, <cr>

*OK <cr> name has been cleared

Name,zzt <cr>

*OK <cr>

Name,? <cr>

?Name,zzt <cr>
*OK <cr>

Name,zzt <cr>

*OK <cr>

Name,? <cr>

?Name,zzt <cr>

Response codes

Command syntax

- *OK,1** <cr> enable response **default**
- *OK,0** <cr> disable response
- *OK,?** <cr> response on/off?

Example

Response

R <cr>

57.38 <cr>
***OK** <cr>

***OK,0** <cr>

no response, ***OK** disabled

R <cr>

57.38 <cr> ***OK** disabled

***OK,?** <cr>

?*OK,1 <cr> or **?*OK,0** <cr>

Other response codes

- *ER** unknown command
- *OV** over volt ($VCC \geq 5.5V$)
- *UV** under volt ($VCC \leq 3.1V$)
- *RS** reset
- *RE** boot up complete, ready
- *SL** entering sleep mode
- *WA** wake up

These response codes cannot be disabled

Reading device status

Command syntax

Status <cr> voltage at Vcc pin and reason for last restart

Example

```
Status <cr>
```

Response

```
?Status,P,5.038 <cr>  
*OK <cr>
```

Response breakdown

?Status,	P,	5.038
	↑	↑
	Reason for restart	Voltage at Vcc

Restart codes

P	powered off
S	software reset
B	brown out
W	watchdog
U	unknown

Sleep mode/low power

Command syntax

Send any character or command to awaken device.

Sleep <cr> enter sleep mode/low power

Example

- 38400
- 57600
- 115200

Standby

Baud,38400 <cr>

Changing
baud rate

*OK <cr>

(reboot)

Standby

Protocol lock

Command syntax

Locks device to UART mode.

`Plock,1 <cr>` enable Plock

`Plock,0 <cr>` disable Plock **default**

`Plock,? <cr>` Plock on/off?

Example

Response

`Plock,1 <cr>`

`*OK <cr>`

`Plock,0 <cr>`

`*OK <cr>`

`Plock,? <cr>`

`?Plock,1 <cr>` or `?Plock,0 <cr>`

`Plock,1`

`*OK <cr>`

`I2C,100`

cannot change to I²C
`*ER <cr>`

cannot change to I²C

Factory reset

Command syntax

Factory <cr> enable factory reset

Example

Factory <cr>

Response

*OK <cr>

Factory <cr>

(reboot)

*OK <cr>

*RS <cr>

*RE <cr>

Baud rate will not change

Change to I²C mode

Command syntax

Default I²C address 111 (0x6F)

I2C,n <cr> sets I²C address and reboots into I²C mode

n = any number 1 – 127

Example

Response

I2C,100 <cr>

*OK (reboot in I²C mode)

Wrong example

Response

I2C,139 <cr> n ≠ 127

*ER <cr>

I2C,100

(reboot)

Green
*OK <cr>

Blue
now in I²C mode

Manual switching to I²C

- Disconnect ground (power off)
- Disconnect TX and RX
- Connect TX to INT
- Confirm RX is disconnected
- Connect ground (power on)
- Wait for LED to change from **Green** to **Blue**
- Disconnect ground (power off)
- Reconnect all data and power

Manually switching to I²C will set the I²C address to 111 (0x6F)

Example

Wrong Example

I²C mode

The I²C protocol is *considerably more complex* than the UART (RS-232) protocol. Atlas Scientific assumes the embedded systems engineer understands this protocol.

To set your EZO™ device into I²C mode click [here](#)

Settings that are retained if power is cut

- Calibration
- Change I²C address
- Hardware switch to UART mode
- LED control
- Protocol lock
- Software switch to UART mode

Settings that are **NOT** retained if power is cut

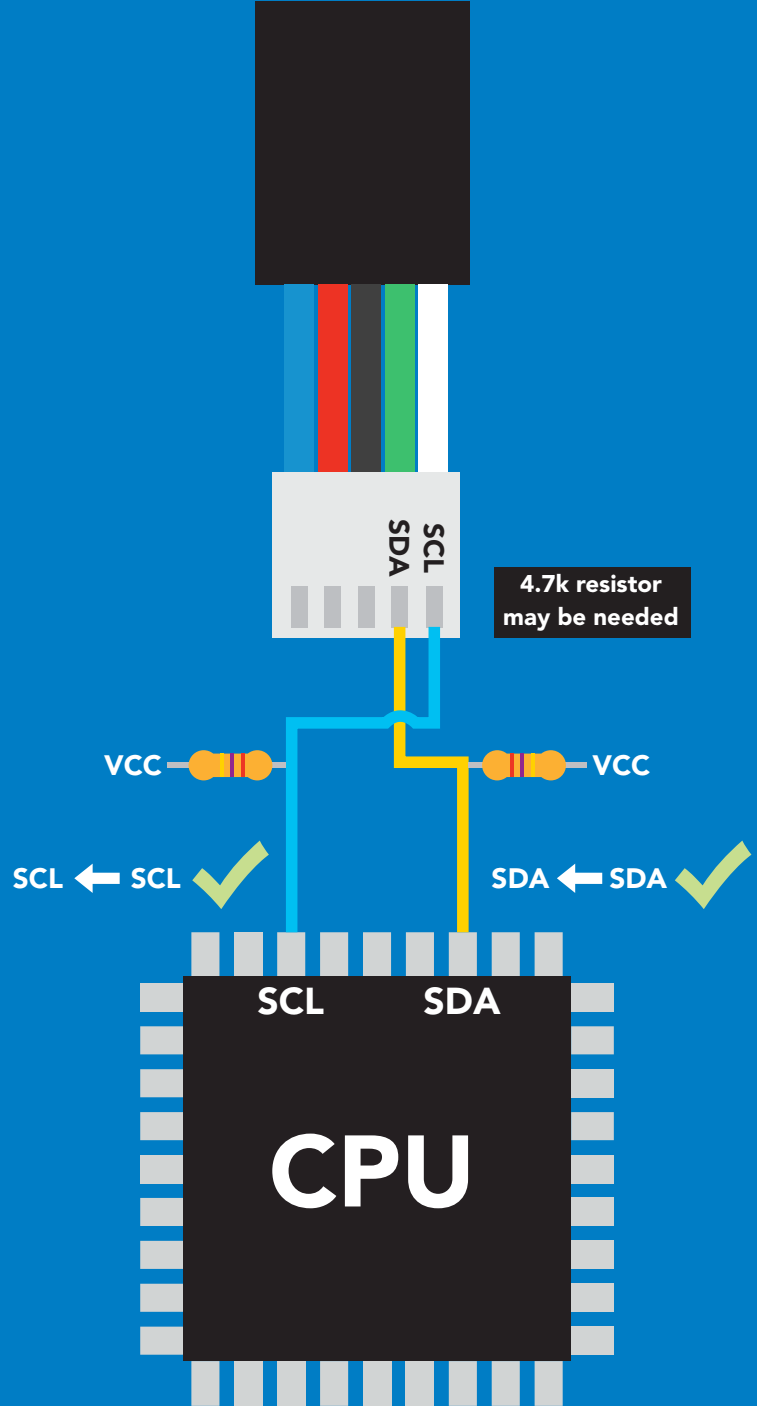

- Sleep mode

I²C mode

I²C address (0x01 – 0x7F)
111 (0x6F) default

Vcc 3.3V – 5.5V

Clock speed 100 – 400 kHz

Data format

Smallest string 4 characters

Largest string 24 characters

Sending commands to device

Example

Advanced

Requesting data from device

Advanced

Response codes & processing delay

After a command has been issued, a 1 byte response code can be read in order to confirm that the command was processed successfully.

Reading back the response code is completely optional, and is not required for normal operation.

Example

```
I2C_start;  
I2C_address;  
I2C_write(EZO_command);  
I2C_stop;
```

```
delay(300);
```

Processing delay

```
I2C_start;  
I2C_address;  
Char[ ] = I2C_read;  
I2C_stop;
```

If there is no processing delay or the processing delay is too short, the response code will always be 254.

Response codes

Single byte, not string

255	no data to send
254	still processing, not ready
2	syntax error
1	successful request

Firmware updates

V1.0 – Initial release (August 14, 2020)

Warranty

Atlas Scientific™ Warranties the EZO-HUM™ Embedded Humidity Sensor to be free of defect during the debugging phase of device implementation, or 30 days after receiving the EZO-HUM™ Embedded Humidity Sensor (which ever comes first).

The debugging phase

The debugging phase as defined by Atlas Scientific™ is the time period when the EZO-HUM™ Embedded Humidity Sensor is connected into a bread board, or shield. If the EZO-HUM™ Embedded Humidity Sensor is being debugged in a bread board, the bread board must be devoid of other components. If the EZO-HUM™ Embedded Humidity Sensor is being connected to a microcontroller, the microcontroller must be running code that has been designed to drive the EZO-HUM™ Embedded Humidity Sensor exclusively and output the EZO-HUM™ Embedded Humidity Sensor data as a serial string.

It is important for the embedded systems engineer to keep in mind that the following activities will void the EZO-HUM™ Embedded Humidity Sensor warranty:

- **Soldering any part to the EZO-HUM™ Embedded Humidity Sensor.**
- **Running any code, that does not exclusively drive the EZO-HUM™ Embedded Color Sensor and output its data in a serial string.**
- **Embedding the EZO-HUM™ Embedded Humidity Sensor into a custom made device.**
- **Removing any potting compound.**

Reasoning behind this warranty

Because Atlas Scientific™ does not sell consumer electronics; once the device has been embedded into a custom made system, Atlas Scientific™ cannot possibly warranty the EZO-HUM™ Embedded Humidity Sensor, against the thousands of possible variables that may cause the EZO-HUM™ Embedded Humidity Sensor to no longer function properly.

Please keep this in mind:

- 1. All Atlas Scientific™ devices have been designed to be embedded into a custom made system by you, the embedded systems engineer.**
- 2. All Atlas Scientific™ devices have been designed to run indefinitely without failure in the field.**
- 3. All Atlas Scientific™ devices can be soldered into place, however you do so at your own risk.**

Atlas Scientific™ is simply stating that once the device is being used in your application, Atlas Scientific™ can no longer take responsibility for the EZO-HUM™ Embedded Humidity Sensor continued operation. This is because that would be equivalent to Atlas Scientific™ taking responsibility over the correct operation of your entire device.
