## Ferrite Chip Beads

Signal Transformer is introducing an entirely new family to its portfolio of passive devices with the ferrite chip beads with the release of the second of three series, FCB-0603/0603A. Height profiles of 0.8 mm, small footprints of 2.00 mm x 1.25 mm and broad range of inductance and maximum resistance values, make them idea for a wide range of applications.

A ferrite bead is a passive device (also known as ferrite chokes, blocks, cores, rings, EMI filters, or chokes) that filters high frequency noise energy over a broad frequency range. Its technical purpose in a circuit as a low pass filter, meaning it allows only low frequencies while blocking others. They are used to absorb high frequency noise (over its intended frequency range) and dissipates the noise energy in the form of heat to filter out the unwanted signal (noise). This leads to improved signal quality and overall circuit improvement.

### General Features

- A Series designed for typical current applications
- P Series intended for high current applications
  - Suitable for filtering noise for high power applications
- Multilayer inductor with ferrite core
- Compact size
- Low Profile
- Automated process

### Specifications

- Impedance: 10  $\Omega$  to 1500  $\Omega$
- Rated Current: 0.3 A to 6.0 A
- DC Resistance: 0.01  $\Omega$  to 0.60  $\Omega$
- Operating Temperature Range: -55°C to +125°C (Including coil self-temperature rise)
- Storage Temperature Range (component): -40°C to +125°C

### Applications

- Notebook computers / Tablets
- Digital Cameras
- Mobile phones
- Remote controls
- Game Machines
- Monitors
- Motherboards

## PRODUCT IDENTIFICATION

**FCB - 0603 A - 121 A**

**Type / Product Series**  
**FCB** = Ferrite Chip Beads

**EIA Code**  
**0603** = 1.6 x 0.8 x 0.8 mm

**Material**  
 No code = Standard ratio of material  
**A** = Revised ratio of material

**Impedance \***  
**121** = 120 Ω

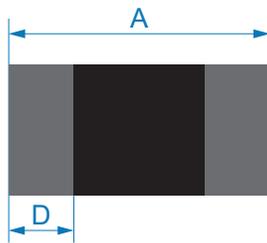

**Identification Code**  
**A** = General purpose  
**P** = High current applications

\* Note: Expressed by three figures. The unit is ohm (Ω). The first and second figures are significant digits, the third figure expresses the number of zeros which follow the two figures.

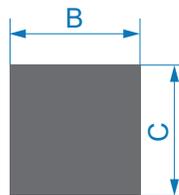

## MECHANICAL SPECIFICATIONS

Dimensions are in mm.

## RECOMMENDED REFLOW SOLDERING CONDITIONS (SMT-TYP)

- **ADD**

The recommended reflow conditions as above graph, is set according to our soldering equipment.

Since various manufactures may have different reflow soldering equipment, products, process conditions, set methods, etc., when setting the reflow conditions, please adjust and confirm according to users' environment/equipment.

- **Notice**

- Solder reflow temperature:  $+250^{\circ}\text{C}$  max. for maximum 10 seconds
- It is not recommended to solder inductors by soldering iron
- Please contact us for details

## About Signal Transformer

Signal Transformer is known as the world's leader of wire wound magnetic solutions since 1959. With over 50 years of experience manufacturing transformers, chokes, inductors and custom or modified standard products. Signal offers not only the most comprehensive line of certified standard power conversion products, with our vast engineering, manufacturing and regulatory resources; Signal Transformer excels in the design and manufacturer of cost effective, specialized platforms.
