

# Memory FeRAM

## 64K (8K × 8) Bit SPI

### MB85RS64VY (AEC-Q100 Compliant)

#### ■ DESCRIPTION

MB85RS64VY is a FeRAM (Ferroelectric Random Access Memory) chip in a configuration of 8,192 words × 8 bits, using the ferroelectric process and silicon gate CMOS process technologies for forming the nonvolatile memory cells. This product is specifically targeted for high-temperature environment such as automotive applications.

MB85RS64VY adopts the Serial Peripheral Interface (SPI).

The MB85RS64VY is able to retain data without using a back-up battery, as is needed for SRAM.

The memory cells used in the MB85RS64VY can be used for  $10^{13}$  read/write operations, which is a significant improvement over the number of read and write operations supported by Flash memory and E<sup>2</sup>PROM.

As MB85RS64VY does not need any waiting time in writing process, the write cycle time of MB85RS64VY is much shorter than that of Flash memories or E<sup>2</sup>PROM.

#### ■ FEATURES

- Bit configuration : 8,192 words × 8 bits
- Serial Peripheral Interface : SPI (Serial Peripheral Interface)  
Correspondent to SPI mode 0 (0, 0) and mode 3 (1, 1)
- Operating frequency : 25 MHz (Max.@2.7V to 4.5V), 33MHz(Max.@4.5V to 5.5V)
- High endurance :  $10^{13}$  times / byte
- Data retention : 70.4 years (+85 °C),  
19.1 years (+105 °C)  
5.9 years (+125 °C) or more  
Under evaluation for more than 5.9 years(+125 °C)
- Operating power supply voltage : 2.7V to 5.5V
- Low power consumption : Operating power supply current  
1.8 mA (Max@25 MHz), 2.3 mA (Max@33MHz)  
Standby current 30 μA (Max)  
Sleep current 12 μA (Max)
- Operation ambient temperature range : - 40 °C to +125 °C
- Package : 8-pin plastic SOP  
AEC-Q100 Grade 1 compliant  
RoHS compliant

# MB85RS64VY(AEC-Q100 Compliant)

## ■ PIN ASSIGNMENT

## ■ PIN FUNCTIONAL DESCRIPTIONS

Pin No.	Pin Name	Functional description
1	$\overline{\text{CS}}$	Chip Select pin This is an input pin to make chips select. When $\overline{\text{CS}}$ is "H" level, device is in deselect (standby) status and SO becomes High-Z. Inputs from other pins are ignored for this time. When $\overline{\text{CS}}$ is "L" level, device is in select (active) status. $\overline{\text{CS}}$ has to be "L" level before inputting op-code.
3	$\overline{\text{WP}}$	Write Protect pin This is a pin to control writing to a status register. The writing of status register (see "■ STATUS REGISTER") is protected in related with $\overline{\text{WP}}$ and WPEN. See "■ WRITING PROTECT" for detail.
7	$\overline{\text{HOLD}}$	Hold pin This pin is used to interrupt serial input/output without making chips deselect. When $\overline{\text{HOLD}}$ is "L" level, hold operation is activated, SO becomes High-Z, SCK and SI become do not care. See "■ HOLD OPERATION" for detail.
6	SCK	Serial Clock pin This is a clock input pin to input/output serial data. SI is loaded synchronously to a rising edge, SO is output synchronously to a falling edge.
5	SI	Serial Data Input pin This is an input pin of serial data. This inputs op-code, address, and writing data.
2	SO	Serial Data Output pin This is an output pin of serial data. Reading data of FeRAM memory cell array and status register data are output. This is High-Z during standby.
8	VDD	Supply Voltage pin
4	VSS	Ground pin

# MB85RS64VY(AEC-Q100 Compliant)

## ■ BLOCK DIAGRAM

## ■ SPI MODE

MB85RS64VY corresponds to the SPI mode 0 (CPOL = 0, CPHA = 0), and SPI mode 3 (CPOL = 1, CPHA = 1)

# MB85RS64VY(AEC-Q100 Compliant)

## ■ SERIAL PERIPHERAL INTERFACE (SPI)

MB85RS64VY works as a slave of SPI. More than 2 devices can be connected by using microcontroller equipped with SPI port. By using a microcontroller not equipped with SPI port, SI and SO can be bus connected to use.

**System Configuration with SPI Port**

**System Configuration without SPI Port**

# MB85RS64VY(AEC-Q100 Compliant)

## ■ STATUS REGISTER

Bit No.	Bit Name	Function
7	WPEN	Status Register Write Protect This is a bit composed of nonvolatile memories (FeRAM). WPEN protects writing to a status register (refer to “■ WRITING PROTECT”) relating with $\overline{WP}$ input. Writing with the WRSR command and reading with the RDSR command are possible.
6 to 4	—	Not Used Bits These are bits composed of nonvolatile memories, writing with the WRSR command is possible. These bits are not used but they are read with the RDSR command.
3	BP1	Block Protect This is a bit composed of nonvolatile memory. This defines size of write protect block for the WRITE command (refer to “■ BLOCK PROTECT”). Writing with the WRSR command and reading with the RDSR command are possible.
2	BP0	
1	WEL	Write Enable Latch This indicates FeRAM Array and status register are writable. The WREN command is for setting, and the WRDI command is for resetting. With the RDSR command, reading is possible but writing is not possible with the WRSR command. WEL is reset after the following operations. <ul style="list-style-type: none"> <li>After power ON.</li> <li>After WRDI command recognition.</li> <li>Return from Sleep Mode.</li> </ul> Achieving continuous writing mode, WEL is not reset after following operations making it possible to execute writing commands continuously. <ul style="list-style-type: none"> <li>After WRSR command recognition.</li> <li>After WRITE command recognition.</li> </ul>
0	0	This is a bit fixed to “0”.

## ■ OP-CODE

MB85RS64VY accepts 8 kinds of command specified in op-code. Op-code is a code composed of 8 bits shown in the table below. Do not input invalid codes other than those codes. If  $\overline{CS}$  is risen while inputting op-code, the command are not performed.

Name	Description	Op-code
WREN	Set Write Enable Latch	0000 0110 <sub>B</sub>
WRDI	Reset Write Enable Latch	0000 0100 <sub>B</sub>
RDSR	Read Status Register	0000 0101 <sub>B</sub>
WRSR	Write Status Register	0000 0001 <sub>B</sub>
READ	Read Memory Code	0000 0011 <sub>B</sub>
WRITE	Write Memory Code	0000 0010 <sub>B</sub>
RDID	Read Device ID	1001 1111 <sub>B</sub>
SLEEP	Sleep Mode	1011 1001 <sub>B</sub>
RFU	Reserved for future use	1100 0011 <sub>B</sub>
		1100 0110 <sub>B</sub>
		1100 1110 <sub>B</sub>
		1100 1111 <sub>B</sub>

# MB85RS64VY(AEC-Q100 Compliant)

## ■ COMMAND

### • WREN

The WREN command sets WEL (Write Enable Latch) bit to 1. WEL has to be set with the WREN command before writing operation (WRSR command and WRITE command) .

### • WRDI

The WRDI command resets WEL (Write Enable Latch) bit to 0. Writing operation (WRSR command and WRITE command) are not performed when WEL is reset.

# MB85RS64VY(AEC-Q100 Compliant)

## • RDSR

The RDSR command reads status register data. After op-code of RDSR is input to SI, 8-cycle clock is input to SCK. The SI value is invalid for this time. SO is output synchronously to a falling edge of SCK. In the RDSR command, repeated reading of status register is enabled by sending SCK continuously before rising of  $\overline{CS}$ .

## • WRSR

The WRSR command writes data to the nonvolatile memory bit of status register. After performing WRSR op-code to a SI pin, 8 bits writing data is input. WEL (Write Enable Latch) is not able to be written with WRSR command. A SI value correspondent to bit 1 is ignored. Bit 0 of the status register is fixed to "0" and cannot be written. The SI value corresponding to bit 0 is ignored.  $\overline{WP}$  signal level shall be fixed before performing WRSR command, and do not change the  $\overline{WP}$  signal level until the end of command sequence.

# MB85RS64VY(AEC-Q100 Compliant)

## • READ

The READ command reads FeRAM memory cell array data. Arbitrary 16 bits address and op-code of READ are input to SI. The upper three address bits are invalid. Then, 8-cycle clock is input to SCK. SO is output synchronously to the falling edge of SCK. While reading, the SI value is invalid. When  $\overline{CS}$  is risen, the READ command is completed, but keeps on reading with automatic address increment which is enabled by continuously sending clocks to SCK in unit of 8 cycles before  $\overline{CS}$  rising. When it reaches the most significant address, it rolls over to the starting address, and reading cycle keeps on infinitely.

## • WRITE

The WRITE command writes data to FeRAM memory cell array. WRITE op-code, arbitrary 16 bits of address and 8 bits of writing data are input to SI. The upper three address bits are invalid. When 8 bits of writing data is input, data is written to FeRAM memory cell array. Risen  $\overline{CS}$  will terminate the WRITE command, but if you continue sending the writing data for 8 bits each before  $\overline{CS}$  rising, it is possible to continue writing with automatic address increment. When it reaches the most significant address, it rolls over to the starting address, and writing cycle can be continued infinitely.

# MB85RS64VY(AEC-Q100 Compliant)

## • RDID

The RDID command reads fixed Device ID. After performing RDID op-code to SI, 32-cycle clock is input to SCK. The SI value is invalid for this time. SO is output synchronously to a falling edge of SCK. The output is in order of Manufacturer ID (8bit)/Continuation code (8bit)/Product ID (1st Byte)/Product ID (2nd Byte). In the RDID command, 32-bit Device ID is output by continuously sending SCK clock, and SO holds the output state of the last bit until CS is risen.

# MB85RS64VY(AEC-Q100 Compliant)

## • SLEEP

The SLEEP command shifts the LSI to a low power mode called "SLEEP mode". The transition to the SLEEP mode is carried out at the rising edge of  $\overline{CS}$  after operation code in the SLEEP command. However, when at least one SCK clock is inputted before the rising edge of  $\overline{CS}$  after operation code in the SLEEP command, this SLEEP command is canceled.

After the SLEEP mode transition, SCK and SI inputs are logically ignored and SO changes to a High-Z state. When inputs other than  $\overline{CS}$  are not fixed to VCC or VDD, in some case a shoot-through current may flow.

Returning to a normal operation from the SLEEP mode is carried out after  $t_{REC}$  (Max 400  $\mu$ s) time from the falling edge of  $\overline{CS}$  (see the figure below). It is possible to return  $\overline{CS}$  to H level before  $t_{REC}$  time. However, it is prohibited to bring down  $\overline{CS}$  to L level again during  $t_{REC}$  period.

## ■ BLOCK PROTECT

Writing protect block for WRITE command is configured by the value of BP0 and BP1 in the status register.

BP1	BP0	Protected Block
0	0	None
0	1	1800 <sub>H</sub> to 1FFF <sub>H</sub> (upper 1/4)
1	0	1000 <sub>H</sub> to 1FFF <sub>H</sub> (upper 1/2)
1	1	0000 <sub>H</sub> to 1FFF <sub>H</sub> (all)

## ■ WRITING PROTECT

Writing operation of the WRITE command and the WRSR command are protected with the value of WEL, WPEN, WP as shown in the table.

WEL	WPEN	WP	Protected Blocks	Unprotected Blocks	Status Register
0	X	X	Protected	Protected	Protected
1	0	X	Protected	Unprotected	Unprotected
1	1	0	Protected	Unprotected	Protected
1	1	1	Protected	Unprotected	Unprotected

## ■ HOLD OPERATION

Hold status is retained without aborting a command if  $\overline{\text{HOLD}}$  is "L" level while  $\overline{\text{CS}}$  is "L" level. The timing for starting and ending hold status depends on the SCK to be "H" level or "L" level when a  $\overline{\text{HOLD}}$  pin input is transitioned to the hold condition as shown in the diagram below. In case the  $\overline{\text{HOLD}}$  pin transitioned to "L" level when SCK is "L" level, return the  $\overline{\text{HOLD}}$  pin to "H" level at SCK being "L" level. In the same manner, in case the  $\overline{\text{HOLD}}$  pin transitioned to "L" level when SCK is "H" level, return the  $\overline{\text{HOLD}}$  pin to "H" level at SCK being "H" level. Arbitrary command operation is interrupted in hold status, SCK and SI inputs become do not care. And, SO becomes High-Z while reading command (RDSR, READ). If  $\overline{\text{CS}}$  is rising during hold status, a command is aborted. In case the command is aborted before its recognition, WEL holds the value before transition to hold status.

# MB85RS64VY(AEC-Q100 Compliant)

## ■ ABSOLUTE MAXIMUM RATINGS

Parameter	Symbol	Rating		Unit
		Min	Max	
Power supply voltage*	$V_{DD}$	- 0.5	+ 6.0	V
Input voltage*	$V_{IN}$	- 0.5	$V_{DD} + 0.5 (\leq 6.0)$	V
Output voltage*	$V_{OUT}$	- 0.5	$V_{DD} + 0.5 (\leq 6.0)$	V
Operation ambient temperature	$T_A$	- 40	+ 125	°C
Storage temperature	$T_{stg}$	- 55	+ 150	°C

\*: These parameters are based on the condition that  $V_{SS}$  is 0 V.

WARNING: Semiconductor devices may be permanently damaged by application of stress (including, without limitation, voltage, current or temperature) in excess of absolute maximum ratings.  
Do not exceed any of these ratings.

## ■ RECOMMENDED OPERATING CONDITIONS

Parameter	Symbol	Value			Unit
		Min	Typ	Max	
Power supply voltage*1	$V_{DD}$	2.7	—	5.5	V
Operation ambient temperature*2	$T_A$	- 40	—	+ 125	°C

\*1: These parameters are based on the condition that  $V_{SS}$  is 0 V.

\*2: Ambient temperature when only this device is working. Please consider it to be the almost same as the package surface temperature.

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated under these conditions.

Any use of semiconductor devices will be under their recommended operating condition. Operation under any conditions other than these conditions may adversely affect reliability of device and could result in device failure.

No warranty is made with respect to any use, operating conditions or combinations not represented on this data sheet. If you are considering application under any conditions other than listed herein, please contact sales representatives beforehand.

# MB85RS64VY(AEC-Q100 Compliant)

## ■ ELECTRICAL CHARACTERISTICS

### 1. DC Characteristics

(within recommended operating conditions)

Parameter	Symbol	Condition	Value			Unit	
			Min	Typ	Max		
Input leakage current*1	I <sub>LI</sub>	$\overline{WP}$ , $\overline{HOLD}$ , $\overline{SCK}$ , $\overline{CS}$ SI = 0 V to V <sub>DD</sub>	25 °C	—	—	1	μA

### AC Test Condition

Power supply voltage	: 2.7 V to 5.5 V Operation
Operation ambient temperature	: -40 °C to +125 °C
Input voltage magnitude	: $V_{DD} \times 0.7 \leq V_{IH} \leq V_{DD}$ $0 \leq V_{IL} \leq V_{DD} \times 0.3$
Input rising time	: 5 ns
Input falling time	: 5 ns
Input judge level	: V <sub>DD</sub> /2
Output judge level	: V <sub>DD</sub> /2

# MB85RS64VY(AEC-Q100 Compliant)

## AC Load Equivalent Circuit

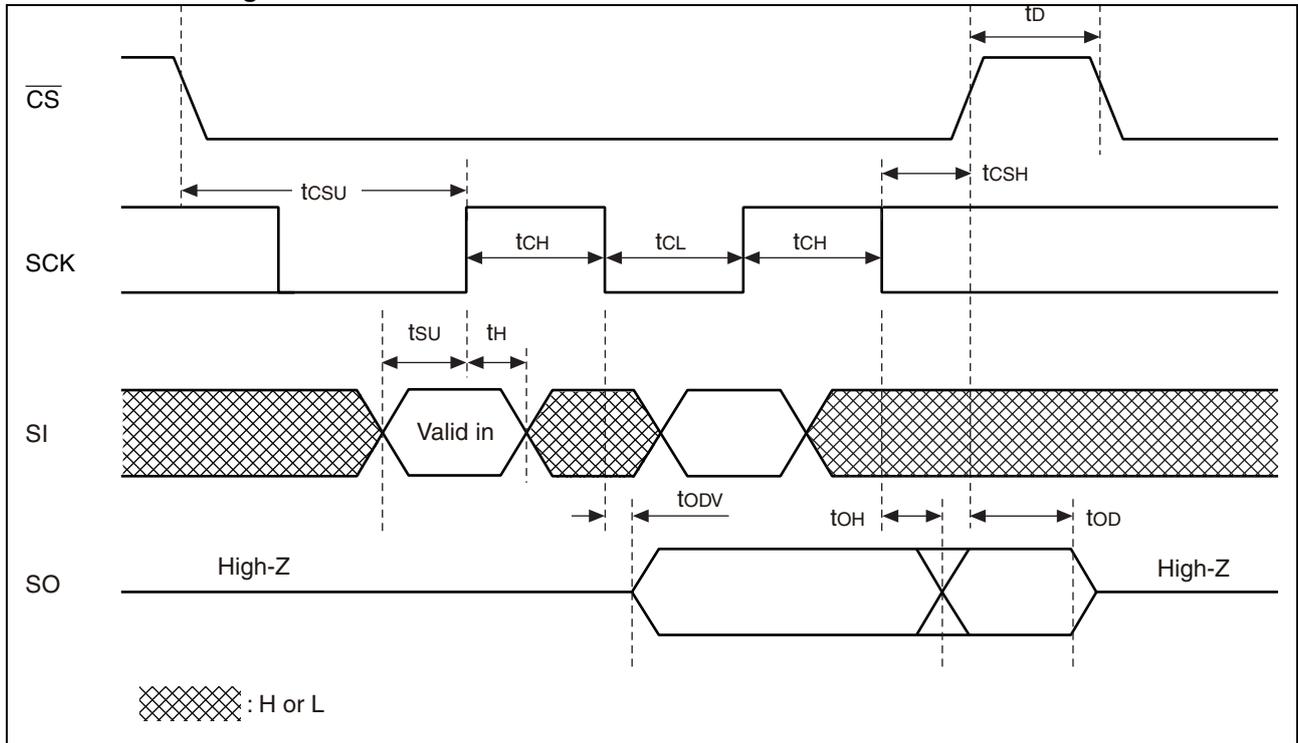

## 3. Pin Capacitance

Parameter	Symbol	Condition	Value		Unit
			Min	Max	
Output capacitance	$C_O$	$V_{DD} = 5.0 \text{ V}$ , $V_{IN} = V_{OUT} = 0 \text{ V to } V_{DD}$ , $f = 1 \text{ MHz}$ , $T_A = +25 \text{ }^\circ\text{C}$	—	8	pF
Input capacitance	$C_I$		—	6	pF

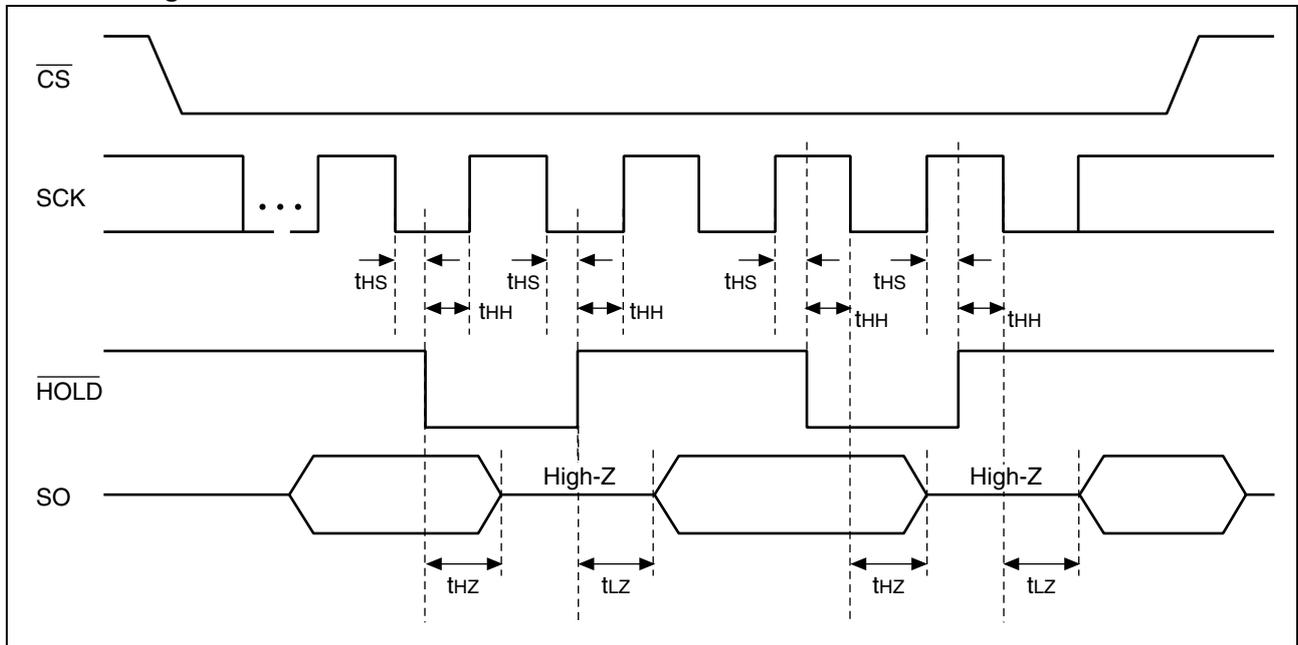

# MB85RS64VY(AEC-Q100 Compliant)

## ■ TIMING DIAGRAM

### • Serial Data Timing

### • Hold Timing

# MB85RS64VY(AEC-Q100 Compliant)

## ■ POWER ON/OFF SEQUENCE

Parameter	Symbol	Value		Unit
		Min	Max	
CS level hold time at power OFF	tpd	400	—	ns
CS level hold time at power ON	tpu	250	—	μs
Power supply rising time	tr	0.05	—	ms/V
Power supply falling time	tf	0.1	—	ms/V

If the device does not operate within the specified conditions of read cycle, write cycle or power on/off sequence, memory data can not be guaranteed.

## ■ FeRAM CHARACTERISTICS

Parameter	Value		Unit	Remarks
	Min	Max		
Read/Write Endurance <sup>*1</sup>	10 <sup>13</sup>	—	Times/byte	Total number of reading and writing. Operation Ambient Temperature T <sub>A</sub> = + 125 °C
Data Retention <sup>*2</sup>	5.9 or more <sup>*3</sup>	—	Years	Operation Ambient Temperature T <sub>A</sub> = + 125 °C
	19.1	—		Operation Ambient Temperature T <sub>A</sub> = + 105 °C
	70.4	—		Operation Ambient Temperature T <sub>A</sub> = + 85 °C

\*1 : Total number of reading and writing defines the minimum value of endurance, as an FeRAM memory operates with destructive readout mechanism.

\*2: Minimum values define retention time of the first reading/writing data right after shipment, and these values are calculated by qualification results.

\*3: Under evaluation for more than 5.9 year(+125 °C).

# MB85RS64VY(AEC-Q100 Compliant)

## ■ NOTE ON USE

We recommend programming of the device after reflow. Data written before reflow cannot be guaranteed.

## ■ ESD AND LATCH-UP

Test	DUT	Value
ESD HBM (Human Body Model) JESD22-A114 compliant	MB85RS64VYPNF-GS-AWE2 MB85RS64VYPNF-GS-AWERE2 MB85RS64VYPNF-GS-BCE1 MB85RS64VYPNF-GS-BCERE1	$\geq  2000 \text{ V} $
ESD CDM (Charged Device Model) JESD22-C101 compliant		$\geq  1000 \text{ V} $
Latch-Up (I-test) JESD78 compliant		$\geq  125 \text{ mA} $
Latch-Up ( $V_{\text{supply}}$ overvoltage test) JESD78 compliant		$\geq 8.25\text{V}$

## ■ REFLOW CONDITIONS AND FLOOR LIFE

# MB85RS64VY(AEC-Q100 Compliant)

## 2.5 Dimensions for Containers

### (1) Dimensions for inner box

Tape width	L	W	H
12	350	335	35

(Dimensions in mm)

### (2) Dimensions for outer box

L	W	H
384	368	225

(Dimensions in mm)

# MB85RS64VY(AEC-Q100 Compliant)

(2)MB85RS64VYPNF-GS-BCE1/MB85RS64VYPNF-GS-BCERE1

## 1. Tube (MB85RS64VYPNF-GS-BCE1)

### 1.1 Tube Dimensions

- Tube/stopper shape (example)

- Tube cross-sections and Maximum quantity

Maximum quantity		
pcs/tube(500mm)	pcs/inner box	pcs/outer box
85	4,250	17,000

No heat resistance.  
Package should not be baked by using tube.

(Dimensions in mm)

- Direction of index in tube

# MB85RS64VY(AEC-Q100 Compliant)

## 1.2 Product label indicators (example)

Label I: Label on Inner box/Moisture Barrier Bag/ (It sticks it on the reel for the emboss taping)  
 [C-3 Label (50mm × 100mm) Supplemental Label (20mm × 100mm)]

# MB85RS64VY(AEC-Q100 Compliant)

## 1.3 Dimensions for Containers

### (1) Dimensions for inner box

L	W	H
540	125	75

(Dimensions in mm)

### (2) Dimensions for outer box

L	W	H
549	277	180

(Dimensions in mm)

# MB85RS64VY(AEC-Q100 Compliant)

## 2. Emboss Tape (MB85RS64VYPNF-GS-BCERE1)

### 2.1 Tape Dimensions (not drawn to scale) (8-pin plastic SOP)

# MB85RS64VY(AEC-Q100 Compliant)

## 2.2 IC orientation

## 2.3 Reel dimensions

Dimensions in mm

A	B	C	W1	W2
254	100	13	13.5	17.5

# MB85RS64VY(AEC-Q100 Compliant)

## 2.5 Dimensions for Containers

### (1) Dimensions for inner box

Tape width	L	W	H
12	265	262	51

(Dimensions in mm)

### (2) Dimensions for outer box

L	W	H
549	277	180

(Dimensions in mm)

# MB85RS64VY(AEC-Q100 Compliant)

### All Rights Reserved.

FUJITSU SEMICONDUCTOR MEMORY SOLUTION LIMITED, its subsidiaries and affiliates (collectively, "FUJITSU SEMICONDUCTOR MEMORY SOLUTION") reserves the right to make changes to the information contained in this document without notice. Please contact your FUJITSU SEMICONDUCTOR MEMORY SOLUTION sales representatives before order of FUJITSU SEMICONDUCTOR MEMORY SOLUTION device.

Information contained in this document, such as descriptions of function and application circuit examples is presented solely for reference to examples of operations and uses of FUJITSU SEMICONDUCTOR MEMORY SOLUTION device. FUJITSU SEMICONDUCTOR MEMORY SOLUTION disclaims any and all warranties of any kind, whether express or implied, related to such information, including, without limitation, quality, accuracy, performance, proper operation of the device or non-infringement. If you develop equipment or product incorporating the FUJITSU SEMICONDUCTOR MEMORY SOLUTION device based on such information, you must assume any responsibility or liability arising out of or in connection with such information or any use thereof. FUJITSU SEMICONDUCTOR MEMORY SOLUTION assumes no responsibility or liability for any damages whatsoever arising out of or in connection with such information or any use thereof.

Nothing contained in this document shall be construed as granting or conferring any right under any patents, copyrights, or any other intellectual property rights of FUJITSU SEMICONDUCTOR MEMORY SOLUTION or any third party by license or otherwise, express or implied. FUJITSU SEMICONDUCTOR MEMORY SOLUTION assumes no responsibility or liability for any infringement of any intellectual property rights or other rights of third parties resulting from or in connection with the information contained herein or use thereof.

The products described in this document are designed, developed and manufactured as contemplated for general use including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high levels of safety is secured, could lead directly to death, personal injury, severe physical damage or other loss (including, without limitation, use in nuclear facility, aircraft flight control system, air traffic control system, mass transport control system, medical life support system and military application), or (2) for use requiring extremely high level of reliability (including, without limitation, submersible repeater and artificial satellite). FUJITSU SEMICONDUCTOR MEMORY SOLUTION shall not be liable for you and/or any third party for any claims or damages arising out of or in connection with above-mentioned uses of the products.

Any semiconductor devices fail or malfunction with some probability. You are responsible for providing adequate designs and safeguards against injury, damage or loss from such failures or malfunctions, by incorporating safety design measures into your facility, equipments and products such as redundancy, fire protection, and prevention of overcurrent levels and other abnormal operating conditions.

The products and technical information described in this document are subject to the Foreign Exchange and Foreign Trade Control Law of Japan, and may be subject to export or import laws or regulations in U.S. or other countries. You are responsible for ensuring compliance with such laws and regulations relating to export or re-export of the products and technical information described herein. All company names, brand names and trademarks herein are property of their respective owners.
