# BCD-to-Seven Segment Latch/Decoder/Driver for Liquid Crystals

The MC14543B BCD-to-seven segment latch/decoder/driver is designed for use with liquid crystal readouts, and is constructed with complementary MOS (CMOS) enhancement mode devices. The circuit provides the functions of a 4-bit storage latch and an 8421 BCD-to-seven segment decoder and driver. The device has the capability to invert the logic levels of the output combination. The phase (Ph), blanking (BI), and latch disable (LD) inputs are used to reverse the truth table phase, blank the display, and store a BCD code, respectively. For liquid crystal (LC) readouts, a square wave is applied to the Ph input of the circuit and the electrically common backplane of the display. The outputs of the circuit are connected directly to the segments of the LC readout. For other types of readouts, such as light-emitting diode (LED), incandescent, gas discharge, and fluorescent readouts, connection diagrams are given on this data sheet.

Applications include instrument (e.g., counter, DVM etc.) display driver, computer/calculator display driver, cockpit display driver, and various clock, watch, and timer uses.

## Features

- Latch Storage of Code
- Blanking Input
- Readout Blanking on All Illegal Input Combinations
- Direct LED (Common Anode or Cathode) Driving Capability
- Supply Voltage Range = 3.0 V to 18 V
- Capable of Driving 2 Low–power TTL Loads, 1 Low–power Schottky TTL Load or 2 HTL Loads Over the Rated Temperature Range
- Pin-for-Pin Replacement for CD4056A (with Pin 7 Tied to V<sub>SS</sub>).
- Chip Complexity: 207 FETs or 52 Equivalent Gates
- NLV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC–Q100 Qualified and PPAP Capable.
- This Device is Pb-Free and is RoHS Compliant

## MARKING DIAGRAM

## **ORDERING INFORMATION**

See detailed ordering and shipping information in the package dimensions section on page 7 of this data sheet.

## MAXIMUM RATINGS (Voltages Referenced to V<sub>SS</sub>)

Parameter	Symbol	Value	Unit
DC Supply Voltage Range	V <sub>DD</sub>	-0.5 to +18.0	V
Input Voltage Range, All Inputs	V <sub>in</sub>	–0.5 to V <sub>DD</sub> +0.5	V
DC Input Current per Pin	l <sub>in</sub>	±10	mA
Power Dissipation per Package (Note 1)	PD	500	mW
Operating Temperature Range	T <sub>A</sub>	-55 to +125	°C
Storage Temperature Range	T <sub>stg</sub>	-65 to +150	°C
Maximum Continuous Output Drive Current (Source or Sink)	I <sub>OHmax</sub> I <sub>OLmax</sub>	10 (per Output)	mA
Maximum Continuous Output Power (Source or Sink) (Note 2)	P <sub>OHmax</sub> P <sub>OLmax</sub>	70 (per Output)	mW

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. Temperature Derating: "D/DW" Package:  $-7.0 \text{ mW/}^{\circ}\text{C}$  From 65°C To 125°C 2.  $P_{OHmax} = I_{OH} (V_{OH} - V_{DD})$  and  $P_{OLmax} = I_{OL} (V_{OL} - V_{SS})$ This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high-impedance circuit. For proper operation, Vin and Vout should be constrained to the range  $V_{SS} \le (V_{in} \text{ or } V_{out}) \le V_{DD}$ . Unused inputs must always be tied to an appropriate logic voltage level (e.g., either  $V_{SS}$  or  $V_{DD}$ ). Unused outputs must be left open.
