

300/500mA Low Dropout Linear Voltage Regulator

General Description

The RT9161/A is a 300/500mA fixed output voltage low dropout linear regulator. Typical ground current is approximately $110\mu A$, from zero to maximum loading conditions. Wide range of available output voltage fits most of applications. Built-in output current-limiting and thermal-limiting provide maximal protection against any fault conditions.

For ease of application, the RT9161/A comes in the popular 3-pin SOT-23 (300mA), SOT-89 (300mA), SOT-223 (500mA), or TO-92 packages.

Ordering Information

RT9161/A-□□□□

- Package Type
 - V : SOT-23-3
 - X : SOT-89
 - G : SOT-223
 - ZL : TO-92 (L-Type)
 - ZT : TO-92 (T-Type)
- Lead Plating System
 - P : Pb Free
 - G : Green (Halogen Free and Pb Free)
- Output Voltage
 - 15 : 1.5V
 - 16 : 1.6V
 - :
 - 49 : 4.9V
 - 50 : 5.0V

- 500mA Output Current
- 300mA Output Current

Note :

Richtek products are :

- RoHS compliant and compatible with the current requirements of IPC/JEDEC J-STD-020.
- Suitable for use in SnPb or Pb-free soldering processes.

Features

- Low Dropout Voltage of 200mV at Output Current 100mA, 450mV at Output Current 300mA, and 750mV at 500mA Output Current
- Guaranteed 300/500mA Output Current
- Internal 1.5Ω P-MOSFET Draws No Base Current
- Low Ground Current $110\mu A$
- 2% Accuracy Output Voltage
- Input Voltage Range up to 12V
- Extremely Tight Load Regulation
- Fast Transient Response
- Current-limiting and Thermal-limiting
- RoHS Compliant and 100% Lead (Pb)-Free

Applications

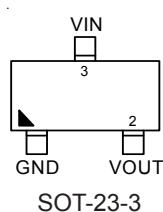

- Voltage Regulator for LAN Card, CD-ROM, and DVD
- Wireless Communication Systems
- Battery Powered Systems

Marking Information

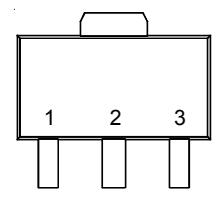

For marking information, contact our sales representative directly or through a Richtek distributor located in your area.

Typical Application Circuit

Part Status

| Part No | Status | Package | Lead Plating System |
|--------------|--------|---------|---------------------|
| RT9161A-XXPX | EOL | SOT-89 | P : Pb Free |

The part status values are defined as below :

Active : Device is in production and is recommended for new designs.

Lifebuy : The device will be discontinued, and a lifetime-buy period is in effect.

NRND : Not recommended for new designs.

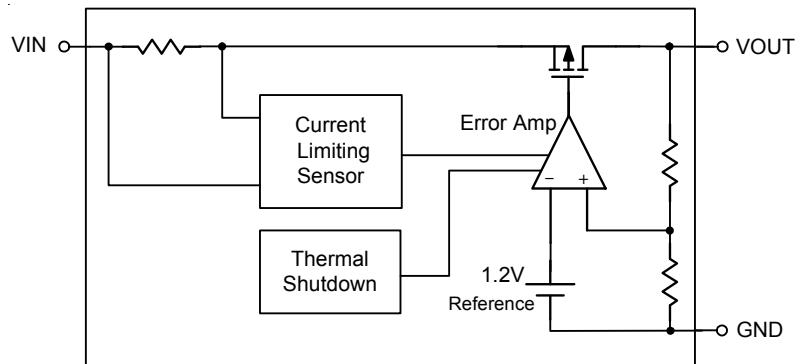

Preview : Device has been announced but is not in production.

EOL: Richtek has discontinued the production of the device

Functional Pin Description

| Pin Name | Pin Function |
|----------|-----------------|
| VOUT | Output Voltage. |
| GND | Ground. |
| VIN | Power Input. |

Functional Block Diagram

Absolute Maximum Ratings

| | |
|---|----------------|
| • Input Voltage ----- | -0.3 to 14V |
| • Operating Junction Temperature Range ----- | -40°C to 125°C |
| • Storage Temperature Range ----- | -65°C to 150°C |
| • Power Dissipation, P_D @ $T_A = 25^\circ C$ | |
| SOT-23-3 ----- | 0.4W |
| SOT-89 ----- | 0.571W |
| SOT-223 ----- | 0.741W |
| TO-92 ----- | 0.625W |
| • Package Thermal Resistance (Note 1) | |
| SOT-23-3, θ_{JA} ----- | 250°C/W |
| SOT-23-3, θ_{JC} ----- | 140°C/W |
| SOT-89, θ_{JA} ----- | 175°C/W |
| SOT-89, θ_{JC} ----- | 100°C/W |
| SOT-223, θ_{JA} ----- | 135°C/W |
| SOT-223, θ_{JC} ----- | 15°C/W |
| TO-92, θ_{JA} ----- | 160°C/W |
| TO-92, θ_{JC} ----- | 125°C/W |

Electrical Characteristics

($T_A = 25^\circ C$, $C_{IN} = 1\mu F$, $C_{OUT} = 10\mu F$, unless otherwise specified.)

| Parameter | Symbol | Test Conditions | Min | Typ | Max | Unit |
|--|-------------------|--|-----|---------|----------|-------------|
| Output Voltage Accuracy | ΔV_{OUT} | $I_L = 1mA$, $V_{IN} = 5V$ | -2 | -- | 2 | % |
| Output Voltage Temperature Coefficient | | | -- | 50 | 150 | PPM/°C |
| Line Regulation | ΔV_{LINE} | $I_L = 1mA$, $V_{IN} = 4.5$ to $12V$ | -- | 2 | 3 | % V_{OUT} |
| Load Regulation (Note 2) | ΔV_{LOAD} | $I_L = 1mA$ to $300/500mA$, $V_{IN} = 5V$ | -- | 1 | 30/50 | mV |
| Current Limit (Note 3) | RT9161 | $V_{IN} = 5V$, $V_{OUT} = 0V$ | 350 | 580 | -- | mA |
| | RT9161A | | 500 | 900 | -- | |
| Dropout Voltage (Note 4) | V_{DROP} | $I_L = 300/500mA$ | -- | 450/750 | 600/1000 | mV |
| Standby Current | $I_{STANDBY}$ | $I_L = 0$, $V_{IN} = 12V$ | -- | 110 | 180 | μA |

Note 1. θ_{JA} is measured in the natural convection at $T_A = 25^\circ C$ on a low effective single layer thermal conductivity test board of JEDEC 51-3 thermal measurement standard.

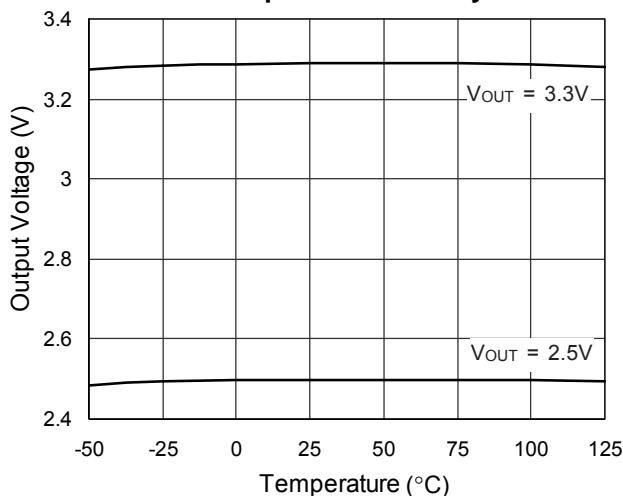

Note 2. Regulation is measured at constant junction temperature, using pulsed ON time.

Note 3. Current Limit is measured at constant junction temperature, using pulsed ON time.

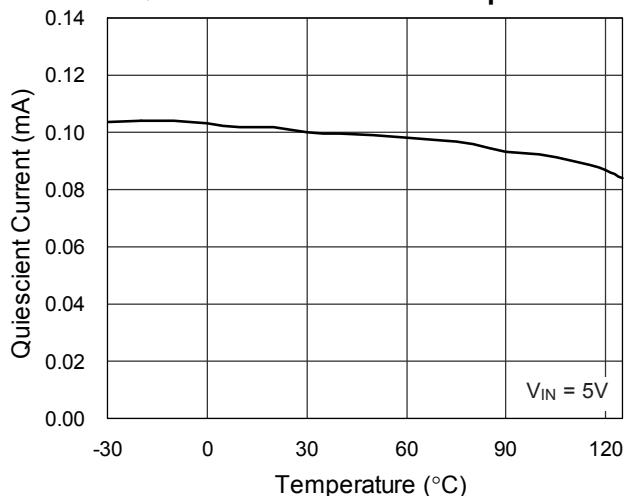

Note 4. The dropout voltage is defined as $V_{IN} - V_{OUT}$, which is measured when V_{OUT} is $V_{OUT(NORMAL)} - 100mV$.

Line Transient Response

Application Information

A 10uF capacitor with 200mΩ or higher ESR, connecting between VOUT and GND pins, is recommended for stability. A capacitor with ESR smaller than 200 mΩ may cause VOUT oscillation as shown in Figure 1. Operating temperature should be well considered to ensure that the capacitance is no less than 10uF over the operating temperature range. Please take the notice that Aluminum electrolytic capacitors may cause VOUT oscillation when operating below -25°C. The capacitance can be increased without limit for better transient response.

A 1uF or higher capacitor should be placed between VIN and GND to filter out input noise and ensure stable output voltage.

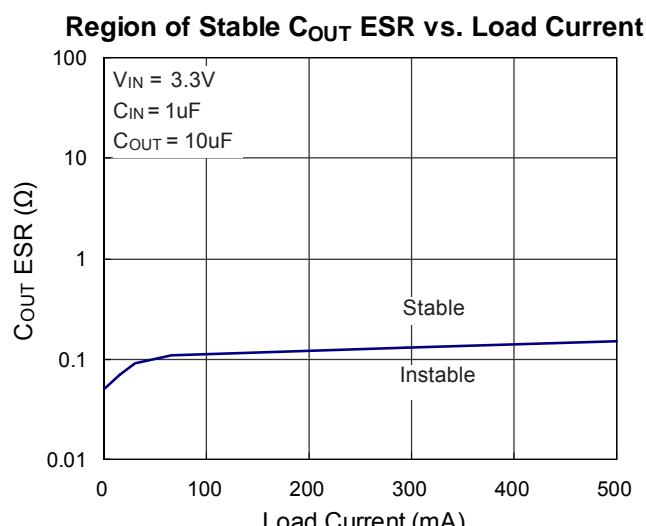

Figure 1

Thermal protection limits power dissipation in RT9161/A. When the operation junction temperature exceeds 165°C, the OTP circuit starts the thermal shutdown function and turns the pass element off. The pass element turn on again after the junction temperature cools by 30°C.

For continuous operation, do not exceed absolute maximum operation junction temperature 125°C. The power dissipation definition in device is :

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} + V_{IN} \times I_Q$$

The maximum power dissipation depends on the thermal resistance of IC package, PCB layout, the rate of surroundings airflow and temperature difference between junction to ambient. The maximum power dissipation can be calculated by following formula :

$$P_{D(MAX)} = (T_{J(MAX)} - T_A) / \theta_{JA}$$

Where T_{J(MAX)} is the maximum operation junction temperature 125°C, T_A is the ambient temperature and the θ_{JA} is the junction to ambient thermal resistance.

For recommended operating conditions specification of RT9161/A, where T_{J(MAX)} is the maximum junction temperature of the die (125°C) and T_A is the maximum ambient temperature. The junction to ambient thermal resistance θ_{JA} is layout dependent. For SOT-223 packages, the thermal resistance θ_{JA} is 135°C/W on the standard JEDEC 51-3 single-layer 1S thermal test board. The maximum power dissipation at T_A = 25°C can be calculated by following formula :

$$P_{D(MAX)} = (125^\circ\text{C} - 25^\circ\text{C}) / 250 = 0.400 \text{ W for}$$

SOT-23-3 packages

$$P_{D(MAX)} = (125^\circ\text{C} - 25^\circ\text{C}) / 175 = 0.571 \text{ W for}$$

SOT-89 packages

$$P_{D(MAX)} = (125^\circ\text{C} - 25^\circ\text{C}) / 135 = 0.741 \text{ W for}$$

SOT-223 packages

$$P_{D(MAX)} = (125^\circ\text{C} - 25^\circ\text{C}) / 160 = 0.625 \text{ W for}$$

TO-92 packages

The maximum power dissipation depends on operating ambient temperature for fixed T_{J(MAX)} and thermal resistance θ_{JA}. For RT9161/A packages, the Figure 2 of derating curves allows the designer to see the effect of rising ambient temperature on the maximum power allowed.
