Layou	_ayout									
Pad	Function	Note								
1	Output Enable/Disable	The oscillator shall operate when this pad is not connected. The output will be inhibited (high impedance state) when this pad is logic low. Recommend connecting this pad to V_{CC} if the oscillator is to be always on.								
2	Ground (GND)									
3	Output	CMOS								
4	V _{CC} Supply Voltage	Connect an appropriate power supply bypass capacitor as close as possible								

For Optimum Jitter Performance, Pletronics recommends:

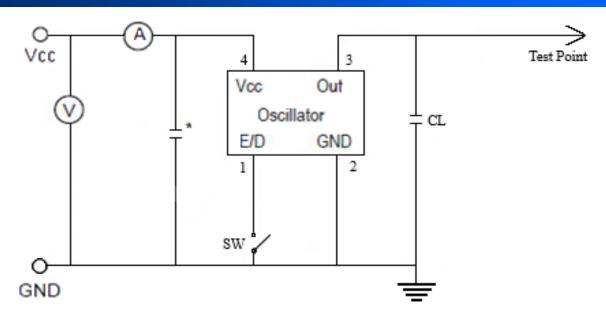

- A ground plane under the device
- Do not route large transient signals (both current and voltage) under the device
- Do not place near a large magnetic field such as a high frequency switching power supply
- Do not place near piezoelectric buzzers or mechanical fans
