TA010

TA010 CryptoAutomotive™ Summary Data Sheet

Introduction

The TA010 is a member of the Microchip Technology Inc. CryptoAutomotive™ product family. The device is targeted for Electric Vehicle battery authentication and ecosystem control applications and is intended to be used as a companion device with Microchip's or other vendor's microcontrollers.

Features

- Cryptographic Authentication Device with Secure Hardware-Based Key Storage:
    - Protected storage for private key, certificates, symmetric key or user data
- Hardware Support for the Asymmetric Sign:
    - ECDSA: FIPS186-4 Elliptic Curve Digital Signature
    - NIST standard P-256 Elliptic Curve Support
- Hardware Support for SHA-256 and HMAC
- Internal Asymmetric Key Generation
- Internal High-Quality NIST SP 800-90A/B/C Random Number Generator (RNG)
- Joint Interpretation Laboratory (JIL) Score for Resistance to Attackers with Attack Potential – High
    - Evaluated to the standard "Jil-Application-Of-Attack-Potential-To-Smartcards-V3.1"
    - Achieved through tamper-resistant countermeasures to resist environmental, non-invasive and invasive Fault attacks
- FIPS 140-3 Compliance Mode Configuration Option
- Field-Programmable EEPROM:
    - Single ECC private key
    - One device certificate and one CA signer certificate
    - Single symmetric secret key
    - 64-byte user memory
    - >40-year data retention at +55℃
- Monotonic Counter with the Maximum Count Value of 10,000
- Unique 72-bit Serial Number
- Two Interface Options Available:
    - 125 kbps Pulse-Width Modulated (PWM) single-wire serial interface (SWI)
    - Parasitic power support for single-wire interface with External Capacitor
    - 400 kHz Fast mode I^2C interface
- 130 nA Nominal Sleep Current
- Automotive Temperature of -40℃ to +125℃ Ambient Operating Range
- Human Body Model (HBM) ESD: I^2C Devices: >4 kV; SWI Devices >7 kV
- Packaging Options:
    - 8-Pad UDFN (3 mm x 3 mm), 8-lead SOIC, 3-lead Contact

Use Cases
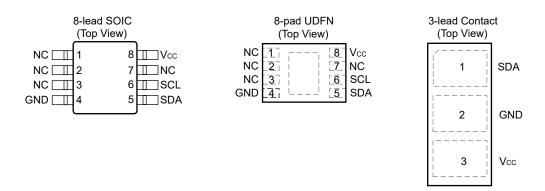

• Electric Vehicle (EV) Battery Authentication
• Ecosystem Control through Asymmetric Authentication / PKI

```

Note:
 1. Exposed backside paddle of the UDFN package is recommended to be connected to GND.

Table of Contents

1. Overview

1.1 Use Cases

The TA010 is a member of the Microchip CryptoAutomotive family of high-security cryptographic devices that combine world-class hardware-based key storage with hardware cryptographic accelerators to implement authentication.

The TA010 device has a command set that allows for its usage in many applications. The primary uses include the following:

- **Electric Vehicle (EV) Battery Authentication**
  Validates that a battery is authentic and comes from the OEM shown on the battery
- **Ecosystem Control and Anti-Counterfeiting**
  Validates that a system or component is authentic and comes from the OEM shown on the nameplate

> **Tip:** The use cases shown are examples of what can be implemented with the TA010 but is not exhaustive. Contact Microchip Technical Support to determine if a use case outside of these can be implemented.

1.2 Device Features

The TA010 includes an EEPROM array that can be used to store one private ECC P-256 key, two encoded certificates, one symmetric secret key, miscellaneous read/write data, consumption logging and security configurations. Write access to the various Data zone slots and configuration subzones of memory can be restricted.

The device comes in one of two possible serial interfaces. The I^{2}C version of the device supports a standard I^{2}C interface at speeds of up to 400 kHz. The interface is compatible with the Standard and Fast modes I^{2}C interface specifications. The device also supports a Microchip proprietary PWM Single-Wire Interface (SWI), which can reduce the number of GPIOs required on the system processor and/or reduce the number of pins on connectors. When in SWI mode, the TA010 can be operated in Parasitic Power mode, reducing the pin count to just two pins.

Each TA010 unit is shipped with a unique 72-bit serial number. The TA010 also features a wide array of defense mechanisms specifically designed to prevent physical attacks on the device itself or logical attacks on the data transmitted between the device and the system. Hardware restrictions on how a key is used or generated provide further defense against certain styles of attack.

For those users interested in a higher level of security, a Compliance mode bit is available in the Configuration zone. If the Compliance bit is set, compliance with various aspects of FIPS 140-3 is enforced by the device.

The TA010 also has a monotonic counter that can be attached to either the ECC P-256 private key or the HMAC key to limit the use of one of these keys. If so desired, the monotonic counter can also be used by the host system.

1.3 Cryptographic Operation

The TA010 device implements a complete asymmetric (public/private) key cryptographic signature solution based upon Elliptic Curve Cryptography and the ECDSA signature protocol. The device features hardware acceleration for the NIST standard P-256 prime curve and supports high-quality private key generation and ECDSA signature generation.

The hardware accelerator can implement asymmetric cryptographic operations faster than software running on standard microcontrollers without the usual high risk of key exposure, which is endemic to standard microcontrollers.

The TA010 also implements SHA-256 and its derivative HMAC hash. SHA-256 can be used to facilitate message hashing for ECDSA signature generation. The device is designed to securely store a private key along with its associated public keys and certificates. Random private key generation is done internally within the device to ensure

that the private key can never be known outside of the device. The public key corresponding to a stored private key is always returned when the key is generated and can also be requested at a future point in time.

The TA010 can generate high-quality random numbers using its internal physical random number generator. This sophisticated function includes run-time health testing designed to ensure that values generated from the internal noise source contain sufficient entropy at the time of use. The RNG is designed to meet the requirements documented in the NIST SP800-90A, SP800-90B and SP800-90C documents.

These random numbers can be employed for any purpose, including for use as part of the device's cryptographic protocols. Each random number is assured to be essentially unique from all numbers ever generated on this or any other device; therefore, their inclusion in the protocol calculation ensures that replay attacks (i.e., re-transmitting a previously-successful transaction) will always fail.

Related Links

2.1. Cryptographic Standards

2.   Security Information

2.1   Cryptographic Standards

TA010 follows various industry standards for the computation of cryptographic results. These reference documents are described in the following sections. See the Microchip website for further documentation on NIST CAVP certification of these cryptographic functions.

2.1.1   SHA-256

The TA010 computes the SHA-256 digest based on the algorithm documented here:

http://nvlpubs.nist.gov/nistpubs/FIPS/NIST.FIPS.180-4.pdf

2.1.2   HMAC/SHA-256

TA010 can compute an HMAC digest based upon SHA-256 using a key stored in the EEPROM as documented below:

http://csrc.nist.gov/publications/fips/fips198-1/FIPS-198-1_final.pdf

2.1.3   Elliptic Curve Digital Signature Algorithm (ECDSA)

TA010 computes the Elliptic Curve signatures according to the algorithm documented in:

*   ANSI X9.62-2005 www.ansi.org/
*   FIPS 186-5 specification nvlpubs.nist.gov/nistpubs/FIPS/NIST.FIPS.186-5.pdf

2.2   Security Features

2.2.1   Physical Security

The TA010 incorporates a number of physical security features designed to protect the EEPROM contents from unauthorized exposure.

2.2.2   Random Number Generator (RNG)

The TA010 device includes a high-quality cryptographic RNG implemented according to the NIST standards SP800-90A/B/C.

2.2.3   Compliance Mode

For enhanced security, a Compliance mode is included in the TA010 device. This mode is enabled through use of a configuration bit. If the Compliance bit is set, compliance with various aspects of FIPS140-3 is enforced by the device.

3. Electrical Characteristics

3.1 Absolute Maximum Ratings

Operating Temperature	-40°C to +125°C
Storage Temperature	-65°C to +150°C
Maximum Operating Voltage	6.0V
DC Output Low Current	20 mA
Voltage on any Pin -0.5V to (V_{CC} + 0.5V)	-0.5V to (V_{CC} + 0.5V)
ESD Ratings:	
Human Body Model (HBM) ESD I²C Devices	>4 kV
Human Body Model (HBM) ESD SWI Devices	>7 kV
Charge Device Model (CDM) ESD	>2 kV

Note: Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification are not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

3.2 DC Parameters

3.2.1 DC Parameters: All I/O Interfaces

Table 3-1. DC Parameters on All I/O Interfaces with V_{CC} Power Applied

Unless otherwise indicated, these values are applicable over the specified operating range from T_A = -40°C to +125°C, V_{CC} = +1.65V to +5.5V.

Parameter	Sym.	Min.	Typ.	Max.	Units	Conditions
Ambient Operating Temperature	T_A	-40	—	+125	°C	—
V_{CC} Ramp Rate[4]	V_{RISE}	—	—	0.1	V/µs	—
Output Low Voltage	V_{OL}	—	—	0.4	V	When the device is in Active mode, V_{CC} = 1.65V to 3.6V for output-low current = 4.0 mA
		—	—	0.4	V	V_{CC} > 3.6V = 10.0 mA[4]
Input Low Threshold	V_{IL1}	-0.5	—	$0.3*V_{CC}$	V	Device is active and CMOSEnable = 1
Input High Threshold	V_{IH1}	$0.7*V_{CC}$	—	V_{CC}+0.5	V	Device is active and CMOSEnable = 1
Input Low Threshold[1, 2]	V_{IL0}	-0.5	—	0.5	V	Device is active and CMOSEnable = 0
Input High Threshold[1, 2]	V_{IH0}	1.2	—	V_{CC}+0.5	V	Device is active and CMOSEnable = 0
Input Leakage (I²C Signals)	I_{IN}	-200	—	200	nA	V_{IN} = V_{CC} or GND

...........continued						
Parameter	**Sym.**	**Min.**	**Typ.**	**Max.**	**Units**	**Conditions**
Sleep Current[3]	I_{SLEEP}	—	130	325[4]	nA	When the device is in Sleep mode, V_{CC} ≤ 3.6V, I/O at either GND or V_{CC}, T_A ≤ +55°C
		—	130	600	nA	V_{CC} ≤ 3.6V, I/O at either GND or V_{CC}, Full temperature Range
		—	130	2000	nA	When the device is in Sleep mode, Over full V_{CC} and temperature range
Current Consumption in I/O Mode	$I_{I/O}$	—	60	300	µA	Waiting for I/O
Theta JA	Θ_{JA}	—	166	—	°C/W	8-lead SOIC
		—	173	—	°C/W	8-pad UDFN
		—	146	—	°C/W	3-lead Contact

Notes:
1. CMOSen = 0 must only be used when V_{CC} is between 2.0V and 5.5V and the host is running on a lower supply voltage than the client. In this mode, the input buffers are referenced to an internal supply and V_{IL} and V_{IH} levels are independent of the external V_{CC} supply over this range. For voltages lower than 2.0V, CMOSen must always be set to '1'.
2. CMOSen = 0 must not be used when SWI Parasitic Power mode is used.
3. The lowest system current will be achieved if the inputs are driven to V_{CC} or allowed to be pulled up to V_{CC} by the pull-up resistors on the signal lines.
4. This condition is characterized but not production tested.

3.2.2 DC Parameters: Single-Wire Interface

Table 3-2. DC Parameters on Single-Wire Interface[1]

Unless otherwise indicated, these values are applicable over the specified operating range from T_A = -40℃ to +125℃, V_{CC} = +1.65V to +5.5V.

Parameter	**Sym.**	**Min.**	**Typ.**	**Max.**	**Units**	**Conditions**
Power Supply Voltage	V_{CC}	1.65V	—	5.5V	V	—
Output Low Voltage	V_{OL}	—	—	0.4	V	When the device is in Active mode, V_{CC} = 1.65V to 3.6V for output-low current = 8.0 mA
		—	—	0.4	V	V_{CC} > 3.6V 16.0 mA[3]
Input High Leakage	I_{IH}	—	1.0	2.0	uA	V_{IN} = V_{CC}
Input Low Leakage	I_{IL}	-200	—	200	nA	V_{IN} = GND
Bus Capacitance	C_{BUS}	—	—	500	pF	—

Notes:

1. All specifications not shown can be found in the All I/O Interfaces Table 3-1.
2. The Single-Wire voltage must never be greater than V_{CC}.
3. This condition is characterized but not production tested.
4. Operation over the C_{BUS} range is ensured by design and is not production tested.

3.2.3   DC Parameters: Single-Wire Interface – Parasitic Power Mode

Table 3-3. DC Parameters on Parasitic Single-Wire Interface

Unless otherwise indicated, these values are applicable over the specified operating range from T_A = -40℃ to +125℃, CMOSen = '1'

Parameter	Sym.	Min.	Typ.	Max.	Units	Conditions
Max. I/O Voltage[2]	V_{PUP}	2.5	—	5.5	V	—
Output Low Voltage	V_{OL}	—	—	0.4	V	When the device is in Active mode, V_{PUP} = 2.5V to 3.6V for output-low current = 8.0 mA
Input Low Leakage[4]	I_{IL}	-200	—	200	nA	V_{IN} = GND, V_{CC_DVC} ≥ 1.65V
Input Low Threshold	V_{IL1}	-0.5	—	0.3*V_{PUP}	V	—
Input High Threshold	V_{IH1}	0.7*V_{PUP}	—	V_{PUP}+0.5	V	—
Bus Capacitance	C_{BUS}	—	—	500	pF	—

Notes:

1. All specifications not shown can be found in the All I/O Interfaces Table 3-1.
2. Single-Wire voltage (V_{PUP}) must never be greater than the maximum V_{PUP} operating voltage.
3. For the lowest system current, the SI/O signal must be driven to V_{PUP} by the host or allowed to be pulled up by the pull-up resistors.
4. Input High leakage cannot be measured in parasitic power mode because the device and decoupling capacitor are charged via the SI/O signal. Low leakage is valid provided device was charged to be within the operational range.
5. Operation over the C_{BUS} range is ensured by design and is not production tested.

4. TA010 Trust Platform Variants and Provisioning Services

Microchip offers secure provisioning services for the TA010 through the Trust Platform. It leverages the Trust Platform Design Suite set of tools (TPDS) and currently offers 3 provisioning flows:

- Trust&GO: Pre-configured and pre-provisioned Secure Elements for fix-function use cases
- TrustFLEX: Pre-configured & provisioned Secure Element with customer-unique credentials
- TrustCUSTOM: Fully customizable Secure Element including configuration and provisioning with customer-unique credentials

The Trust&GO flow provides pre-configured and pre-provisioned secure elements. These products are defined to meet common use case applications for customers that do not require unique credentials. These devices are provided as is and can be ordered directly from Microchip as easily as any standard product.

The TrustFLEX flow leverages the TrustFLEX configurator to input unique customer credentials into a pre-defined configuration and generate a Secure Exchange Package. This package is, then, deployed via the Microchip Secure Provisioning System to enable device ordering. Then, only the customer designated in the Secure Exchange Package can order these devices.

The TrustCUSTOM flow leverages the TrustCUSTOM configurator and provides the ability to fully configure the TA010 device to meet the security requirements for a given application. At the end of the process, a Secure Exchange Package is generated that is deployed to the Microchip Secure Provisioning System. Then, only the customer designated in the Secure Exchange Package can order these devices.

Important: The Microchip Secure Provisioning System is based on Hardware Security Modules (HSMs).

TA010 Trust Platform Products
For the TA010 only TrustFLEX and TrustCUSTOM variants of the products are currently available. The following devices are currently released versions of TA010 Trust products. Additional products may be added in the future.

TA010-TFLXWPC
- The TA010-TFLXWPC was developed to meet the authentication requirements for Automotive grade Power Transmitters developed for the Wireless Power Consortium. Microchip is an authorized manufacturing CA of the Wireless Power Consortium.

TA010-TFLXAUTH
- The TA010-TFLXAUTH was developed to meet the authentication requirements for disposable and accessory applications in the automotive market. The devices provides the ability to do either asymmetric or symmetric authentication.

Table 4-1. TA010 Trust Platform Ordering Codes[1]

Trust Platform Type	Production Ordering Code	Package Type	Temperature Range
TrustFLEX[2]	TA010-TFLXWPCU-Vxx	8-Pad UDFN	Automotive Range -40℃ to +125℃
	TA010-TFLXWPCS-Vxx	8-Pin SOIC	Automotive Range -40℃ to +125℃
	TA010-TFLXAUTHU-Vxx	8-Pad UDFN	Automotive Range -40℃ to +125℃
	TA010-TFLXAUTHS-Vxx	8-Pin SOIC	Automotive Range -40℃ to +125℃
TrustCUSTOM[3]	TA010-TCSMU-Vxx	8-Pad UDFN	Automotive Range -40℃ to +125℃
	TA010-TCSMS-Vxx	8-Pin SOIC	Automotive Range -40℃ to +125℃

Notes:

1. This table is a representative sample of Trust Platform Devices. Please refer to each Trust Platform Type for a more complete list.

2. For a complete list of ordering codes, including sample devices, see the respective data sheets.

3. TrustCUSTOM sample devices correspond to the standard generic TA010 devices. TA010-TCSMU-Vxx/TA010-TCSMS-Vxx is equivalent to TA010-MAYDAT-VAO/TA010-SSYDAT-VAO respectively.
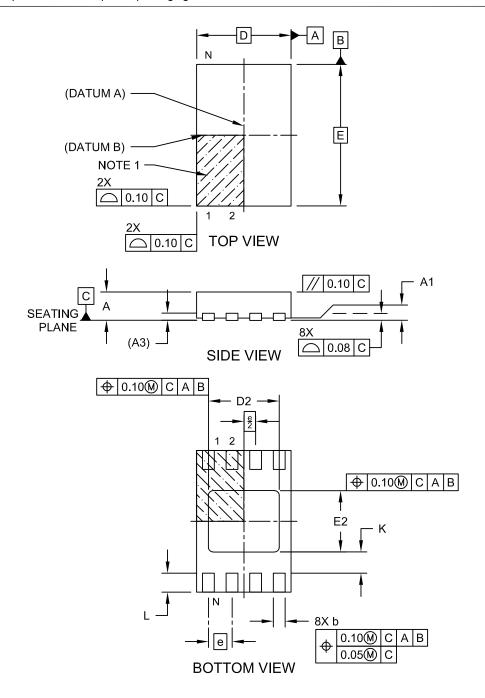

5. Package Marking Information

As part of Microchip's overall security features, the part marking for all crypto devices is intentionally vague. The marking on the top of the package does not provide any information as to the actual device type or the manufacturer of the device. The alphanumeric code on the package provides manufacturing information and will vary with assembly lot. It is recommended that the packaging mark not be used as part of any incoming inspection procedure.

Package Edge to Terminal Edge	g	0.05	0.15	0.25

Notes:

1. Pin 1 visual index feature may vary, but must be located within the hatched area.
2. Dimensioning and tolerancing per ASME Y14.5M
    BSC: Basic Dimension. Theoretically exact value shown without tolerances.
    REF: Reference Dimension, usually without tolerance, for information purposes only.

Microchip Technology Drawing C04-21303 Rev A Sheet 2 of 2

7.   Revision History

Revision A (March 2023)
Original release of the document.

Microchip Information

The Microchip Website

Microchip provides online support via our website at www.microchip.com/. This website is used to make files and information easily available to customers. Some of the content available includes:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip design partner program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

Product Change Notification Service

Microchip's product change notification service helps keep customers current on Microchip products. Subscribers will receive email notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, go to www.microchip.com/pcn and follow the registration instructions.

Customer Support

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Embedded Solutions Engineer (ESE)
- Technical Support

Customers should contact their distributor, representative or ESE for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in this document.

Technical support is available through the website at: www.microchip.com/support

Product Identification System

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

PART NO	-	Package Option	Temp Range	I/O Type	Shipping Format	-	Product Identifier
xxxxx	-	pp	y	xx	s	-	VAO

Base Part No:	TA010	
Package Option	SS	8-Lead SOIC
	MA	8-Pad UDFN
	RB	3-Lead Contact Package
Temperature Range	Y	-40℃ to +125℃
I/O Type	CZ	Single-Wire Interface
	DA	I²C Interface
Shipping Options	B	Tube
	T	Tape and Reel (size varies by package type)
Product Identifier	VAO	Automotive Product Identifier

Examples:
- TA010-SSYCZT-VAO: 8-Lead (0.150" Body), Plastic Gull Wing Small Outline (JEDEC® SOIC), -40℃ to +125℃, Single-Wire, Tape and Reel, 3,300 per Reel.
- TA010-SSYCZB-VAO: 8-Lead (0.150" Body), Plastic Gull Wing Small Outline (JEDEC SOIC), -40℃ to +125℃, Single-Wire, Bulk, 100 Per Tube.
- TA010-SSYDAT-VAO: 8-Lead (0.150" Body), Plastic Gull Wing Small Outline (JEDEC SOIC), -40℃ to +125℃, I²C, Tape and Reel, 3,300 per Reel.
- TA010-SSYDAB-VAO: 8-Lead (0.150" Body), Plastic Gull Wing Small Outline (JEDEC SOIC), -40℃ to +125℃, I²C, Bulk, 100 per Tube.
- TA010-MAYCZT-VAO: 8-Pad (2 x 3 x 0.6 mm Body), Thermally Enhanced Plastic Ultra Thin Dual Flat No Lead Package (UDFN), -40℃ to +125℃, Single-Wire, Tape and Reel, 5,000 per Reel.
- TA010-MAYDAT-VAO: 8-Pad (2 x 3 x 0.6 mm Body), Thermally Enhanced Plastic Ultra Thin Dual Flat No Lead Package (UDFN), -40℃ to +125℃, I²C, Tape and Reel, 5,000 per Reel.
- TA010-RBYCZT-VAO: 3-Lead Contact Package, -40℃ to +125℃, Single-Wire, Tape and Reel, 5,000 per Reel.

Notes:
1. Tape and Reel identifier only appears in the catalog part number description. This identifier is used for ordering purposes and is not printed on the device package. Check with your Microchip Sales Office for package availability with the Tape and Reel option.
2. Small form-factor packaging options may be available. Please check www.microchip.com/packaging for small-form factor package availability or contact your local Sales Office.

Microchip Devices Code Protection Feature

Note the following details of the code protection feature on Microchip products:

- Microchip products meet the specifications contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is secure when used in the intended manner, within operating specifications, and under normal conditions.

- Microchip values and aggressively protects its intellectual property rights. Attempts to breach the code protection features of Microchip product is strictly prohibited and may violate the Digital Millennium Copyright Act.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of its code. Code protection does not mean that we are guaranteeing the product is "unbreakable". Code protection is constantly evolving. Microchip is committed to continuously improving the code protection features of our products.

Legal Notice

This publication and the information herein may be used only with Microchip products, including to design, test, and integrate Microchip products with your application. Use of this information in any other manner violates these terms. Information regarding device applications is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. Contact your local Microchip sales office for additional support or, obtain additional support at www.microchip.com/en-us/support/design-help/client-support-services.

THIS INFORMATION IS PROVIDED BY MICROCHIP "AS IS". MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY, AND FITNESS FOR A PARTICULAR PURPOSE, OR WARRANTIES RELATED TO ITS CONDITION, QUALITY, OR PERFORMANCE.

IN NO EVENT WILL MICROCHIP BE LIABLE FOR ANY INDIRECT, SPECIAL, PUNITIVE, INCIDENTAL, OR CONSEQUENTIAL LOSS, DAMAGE, COST, OR EXPENSE OF ANY KIND WHATSOEVER RELATED TO THE INFORMATION OR ITS USE, HOWEVER CAUSED, EVEN IF MICROCHIP HAS BEEN ADVISED OF THE POSSIBILITY OR THE DAMAGES ARE FORESEEABLE. TO THE FULLEST EXTENT ALLOWED BY LAW, MICROCHIP'S TOTAL LIABILITY ON ALL CLAIMS IN ANY WAY RELATED TO THE INFORMATION OR ITS USE WILL NOT EXCEED THE AMOUNT OF FEES, IF ANY, THAT YOU HAVE PAID DIRECTLY TO MICROCHIP FOR THE INFORMATION.

Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.

Trademarks

The Microchip name and logo, the Microchip logo, Adaptec, AVR, AVR logo, AVR Freaks, BesTime, BitCloud, CryptoMemory, CryptoRF, dsPIC, flexPWR, HELDO, IGLOO, JukeBlox, KeeLoq, Kleer, LANCheck, LinkMD, maXStylus, maXTouch, MediaLB, megaAVR, Microsemi, Microsemi logo, MOST, MOST logo, MPLAB, OptoLyzer, PIC, picoPower, PICSTART, PIC32 logo, PolarFire, Prochip Designer, QTouch, SAM-BA, SenGenuity, SpyNIC, SST, SST Logo, SuperFlash, Symmetricom, SyncServer, Tachyon, TimeSource, tinyAVR, UNI/O, Vectron, and XMEGA are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

AgileSwitch, APT, ClockWorks, The Embedded Control Solutions Company, EtherSynch, Flashtec, Hyper Speed Control, HyperLight Load, Libero, motorBench, mTouch, Powermite 3, Precision Edge, ProASIC, ProASIC Plus, ProASIC Plus logo, Quiet- Wire, SmartFusion, SyncWorld, Temux, TimeCesium, TimeHub, TimePictra, TimeProvider, TrueTime, and ZL are registered trademarks of Microchip Technology Incorporated in the U.S.A.

Adjacent Key Suppression, AKS, Analog-for-the-Digital Age, Any Capacitor, AnyIn, AnyOut, Augmented Switching, BlueSky, BodyCom, Clockstudio, CodeGuard, CryptoAuthentication, CryptoAutomotive, CryptoCompanion, CryptoController, dsPICDEM, dsPICDEM.net, Dynamic Average Matching, DAM, ECAN, Espresso T1S, EtherGREEN, GridTime, IdealBridge, In-Circuit Serial Programming, ICSP, INICnet, Intelligent Paralleling, IntelliMOS, Inter-Chip Connectivity, JitterBlocker, Knob-on-Display, KoD, maxCrypto, maxView, memBrain, Mindi, MiWi, MPASM, MPF, MPLAB Certified logo, MPLIB, MPLINK, MultiTRAK, NetDetach, Omniscient Code Generation, PICDEM, PICDEM.net, PICkit, PICtail, PowerSmart, PureSilicon, QMatrix, REAL ICE, Ripple Blocker, RTAX, RTG4, SAM-ICE, Serial Quad I/O, simpleMAP, SimpliPHY, SmartBuffer, SmartHLS, SMART-I.S., storClad, SQI, SuperSwitcher, SuperSwitcher II, Switchtec, SynchroPHY, Total Endurance, Trusted Time, TSHARC, USBCheck, VariSense, VectorBlox, VeriPHY, ViewSpan, WiperLock, XpressConnect, and ZENA are trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.
