## Description

The TP128X family amplifiers are the newest high supply voltage amplifiers with low offset, low power, and stable high-frequency response. They incorporate 3PEAK's proprietary and patented design techniques to achieve very good AC performance with 7MHz bandwidth, 20 V/ $\mu\text{s}$  slew rate, and low distortion while drawing only 1600  $\mu\text{A}$  of quiescent current per amplifier. The input common-mode voltage range extends to  $V_-$ , and the outputs swing rail-to-rail. The TP128X family can be used as plug-in replacements for many commercially available op-amps to reduce power and improve input/output range and performance.

The TP128X has an over-temperature protection feature to guarantee chip safety. The output of TP128X will enter high impedance when the die temperature reaches around  $170^\circ\text{C}$  and will recover the function when the die temperature is down to around  $150^\circ\text{C}$ .

## Typical Application Circuit

$$V_{\text{OUT}} = (I_{\text{LOAD}} \times R_{\text{SHUNT}}) \times (R_2 / R_1) + V_{\text{REF}}$$

When  $R_3 = R_1$ ,  $R_2 = R_4$ ,  $R_{\text{SHUNT}} \ll R_1$

### Absolute Maximum Ratings<sup>(1)</sup>

Parameter		Min	Max	Unit
	Supply Voltage: (+Vs) – (-Vs)		40	V
	Input Voltage	(-Vs) – 0.3	(+Vs) + 0.3	V
	Differential Input Voltage	(-Vs) – (+Vs)	(+Vs) – (-Vs)	V
	Input Current: +IN, -IN <sup>(2)</sup>	-10	+10	mA
	Output Short-Circuit Duration <sup>(3)</sup>		Infinite	
T <sub>J</sub>	Maximum Junction Temperature		150	°C
T <sub>A</sub>	Operating Temperature Range	-40	125	°C
T <sub>STG</sub>	Storage Temperature Range	-65	150	°C
T <sub>L</sub>	Lead Temperature (Soldering 10 sec)		260	°C

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

(2) The inputs and outputs are protected by ESD protection diodes to negative power supply. If the input or output extends more than 500 mV beyond the negative power supply, the current should be limited to less than 10 mA.

(3) A heat sink may be required to keep the junction temperature below the absolute maximum. This depends on the power supply voltage and how many comparators are shorted. Thermal resistance varies with the amount of PC board metal connected to the package. The specified values are for short traces connected to the leads.

### ESD, Electrostatic Discharge Protection

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.
