Description

TPW3221 is high performance Single Pole/Double Throw (SPDT) analog switches. The devices feature ultra low R_{ON} of 1.2Ω maximum at 4.5V V_{CC} and will operate over the wide V_{CC} range of 1.65V to 5.5V.

The TPW3221 features very low quiescent current even when the control voltage is lower than the V_{CC} supply. This feature services the portable applications very well allowing for the direct interface with processor general purpose I/Os.

The TPW3221 has very excellent channel to channel crosstalk performance to fit the application with high channel to channel isolation requirement.
